

FIELD TIDE NOTE

Field tide reductions were based on predicted tides from Bridgeport, Connecticut, corrected for AWOIS # 3048 in accordance with section 5.9 of the Project Instructions. These correctors were generated onboard with the ship's PDP 11/34 computer and predicted tide tapes for 1983. These tide tapes were supplied to the ships by MOA 231.

All operating tide stations were checked during the course of this project and were found to be operating properly.
