

D. SOUNDING EQUIPMENT AND CORRECTIONS TO ECHO SOUNDINGS

Least depths on all uncharted items except Platform Legs (position # 4) and Propane Tanks on the Dutch Banks (position # 9) were determined by diver held leadline. Least depths on the remaining items, including three AWOIS items, were determined using the Raytheon DSF-6000N fathometer (Recorder/Transcriber S/N B054N, TMU 7191 S/N AB-221) in the High + Low (High Digitized) mode. *SEE also section 4.a.*

Depths obtained by diver held leadline were corrected for predicted tides. Fathometer depths were scanned from the fathogram records and corrected for the following: *of the EVALUATION REPORT.*
