

Tide Correctors

Tide correctors for this survey were provided by N/OMA12 and applied to predicted tides on Juneau, Alaska (945-2210). Soundings were rough plotted using those predicted time and height correctors, details of which can be found in Appendix II.

Further details on all aspects of sounding corrections can be found in the supplemental report Corrections to Echo Soundings Report, OPR-0179-RA-86.

Predicted tides based on the Juneau, Alaska gage were used during field processing. Tide correctors used for the final reduction of soundings reflect approved hourly heights zoned from tide station 945-1851 Hobart Bay, Alaska.
