

the Wine Drag Manual. Smooth Tides were applied to the verified strips. Predicted tide correctors were then applied to the drag depths obtained. These predicted tide correctors were generated and with the ship's Digital PDP 11/34 computer and predicted tide tapes for 1983 and 1984. These tide tapes were supplied to the ship by MOA 201. Hardcopy printouts of the predicted tide correctors used during this survey are included in the data file.
