

## 65. Tide Corrections

The tidal datum for this field examination was mean lower low water. The operating tide station at Bridgeport, CT., served as control for datum determination. This station was also used for predicted tides. No tide stations were established by the HECK in support of this survey.

All hydrographic depths have been corrected for predicted tides. The tidal values were taken from Tide Tables 1989 High and Low Water Predictions, East Coast of North and South America.

Correctors for time and height were selected for the nearest tabulated geographic position to the survey area. - *Approved tides were applied during office processing.*

Tidal correctors were applied online by entering the appropriate values into an HDAPS predicted tide table.
