

## G6. Tide Corrections

The tidal datum for this survey was mean lower low water (MLLW). The tide station at New London was the reference station for this survey. No tide stations were established by the HECK in support of this survey.

All hydrographic depths have been corrected for predicted tides using the zone correctors specified in the project instructions. Tidal correctors were applied on line via the HDAPS predicted tide table. *Approved tidal correctors and tidal zoning values were applied during office processing*
