

The tidal datum for this project is mean lower low water. The operating tide station (877-0570) at Sabine Pass, Texas, served as control for datum determination. The station at Galveston, Texas served as the reference station for predicted tides, the correctors for which were applied on-line using the HDAPS predicted tide table. The following correctors for time and height were taken from the Project Instructions.

<u>Project Area</u>	<u>Time Corrector</u>		<u>Height Ratio</u>
	<u>High Water</u>	<u>Low Water</u>	
Offshore in the Gulf of Mexico	-1 hr 30 min	-1 hr 30 min	x1.44

See APPENDIX V for HDAPS predicted tide tables.
