

The tidal datum for this survey was mean lower low water (MLLW). The tide station at Grand Isle, Louisiana (876-1724) was the reference station for this survey. The station was observed by Rick D. Vinson. No tide stations were established or leveled by the HECK in support of this survey.

All hydrographic depths have been corrected for predicted tides using the zone correctors specified in the project instructions. Tidal correctors were applied on line via the HDAPS predicted tide table. *Approved TIDES AND ZONING were applied during office processing.*
