

The final field sheet was plotted using daily water level correctors determined by a reading taken from the ETG at station 908-7036, St. Joseph, Michigan, and reducing the readings to the IGLD for Lake Michigan of 576.8 feet (175.81 meters). An abstract of the determination of the daily corrector is included in the "Separates to be Included With Survey Data". APPROVED WATER LEVELS APPLIED DURING OFFICE PROCESSING.

Actual water level heights were requested from the Great Lakes Water Levels Unit, N/OMA1211, in a letter dated October 4, 1991. A copy of the letter is included in the appendices of this report. REMOVED FROM ORIGINAL DESCRIPTIVE REPORT AND FILED WITH FIELD RECORDS.
