DESCRIPTIVE REPORT.

The adjusted N. A. 1927 Datum intersection on this sheet was based on Flynn's Church and St. Philip's Church. The projection on the sheet could not be identified as conforming to any available datum. The assumption was made that the stations are the same as those established in 1890. This assumption is substantiated by a good check of the distance between these points based on the new positions. Furthermore, the correction based on Edisto Base, a base recovered and carried forward into the N. A. 1927 triangulation system, is nearly identical with that for the above points. This base being in the same general locality gives additional strength to the correction on this sheet.
