Descriptive Report to Accompany
Hydrographic Sheet No 1539, Great Pond
Long Island

The water level in the Pond, according to local information, varies about three feet during the year, reaching its maximum height after the Spring rains.

At present the Pond is almost a solid mass of grass & weeds and very little open water. On several occasions in the past, however, the Pond has been opened up to the Sound & the salt water then invariably kills all the weed growth.

John C. Gange, Act.
