Estero Bay, Florida

Hydrographic Field Party 745

LT Brent H Traugher

Officer-in-Charge

Surveyed by:

Terry L Dye

---

A. PROJECT

This project was accomplished in accordance with Project Instructions OPR 491 dated 7 January 1970.

B. AREA SURVEYED

The area covered by this survey is Estero Bay, Florida, from Big Carlos Pass to the northern entrance of Fish Trap bay. The limits of the survey are from latitude  $26^{\circ} 21.00'N$ , longitude  $81^{\circ} 52.30'W$  and latitude  $26^{\circ} 25.20'N$ , longitude  $81^{\circ} 55.00'W$  eastward to the head of navigation, including Spring Creek. Field work commenced on 13 July and was completed on 14 December 1970.

C. SOUNDING VESSEL

The only vessel used for this survey was Launch CS-1258. The identifying color is blue.

D. SOUNDING EQUIPMENT

The Raytheon Graphic Recorder, Model DE 723, Serial No. 1998, was used in the survey. A sounding pole and lead-line were also utilized in obtaining soundings. Corrections to be applied to echo soundings were determined from daily bar checks. The bar check was calibrated during

#### D. SOUNDING EQUIPMENT (CON'T)

this period. The "Abstract of Velocity Corrections" appears in the Appendix of this report.

#### E. SMOOTH SHEET

This survey will be plotted at the Atlantic Marine Center (see Section P). All field processing will be completed by party personnel.

#### F. CONTROL

Horizontal control was by three-point sextant fix method. The Appendix contains a complete list of control used and its quality and source. Photo-Hydro signals from Incomplete Manuscripts:

<u>"T" Sheet No.</u>	<u>Scale</u>	<u>Date</u>
TP-00015	1:10,000	1969
TP-00016	1:10,000	1969
TP-00017	1:10,000	1970

No substandard horizontal control was used.

#### G. SHORELINE

Shoreline for this survey was taken from the above listed Incomplete Manuscripts. There are major changes in the shoreline in the vicinity of both New Pass and Big Hickory Pass. These changes are noted on the boatsheet and in the volumes. (Note: New photographs were taken on August 20 or 21, 1970, in which these changes can also be seen). There has been a new bulkhead constructed at latitude  $26^{\circ}24.20'$ , longitude  $81^{\circ}53.40'$ , and this has also been shown on the boatsheet.

#### H. CROSSLINES

Crosslines were run in approximately 10% of the regular system of sounding lines and were in good agreement.

#### I. JUNCTIONS

Junctions were made on the north with H-9147 (745-10-1-70)

I. JUNCTIONS (CON'T)

and on the south with H-9149 (745-10-3-70). Junctions were made with good agreement.

J. COMPARISON WITH PRIOR SURVEY

The latest survey, H-8571 (1960-1961), scale 1:20,000, was furnished for comparison with this survey. The prior survey was limited to the offshore area and the area between passes. A comparison with the prior survey showed considerable shoaling, up to 2 feet of difference in some locations, on the offshore portion of the survey. Radical changes occurred around the passes which necessitated relocation of the shoreline. The changes are due to strong currents and construction of State Road 865 from Estero Island to Bonita Beach.

K. COMPARISON WITH CHART

This survey was compared with Coast and Geodetic Survey chart 856-SC, 7th Ed., October 1970, Scale 1:40,000. Because of the limited amount of basic hydrography previously run in this area, only several comparisons could be made with the present chart.

All Pre-Survey Review Items are listed under this section.

<u>Feature</u>	<u>Position</u>	<u>Remarks</u>
PSI "A" Reported shoaling south entrance to Carlos Pass, Chart Letter No. 1679	26° 23.40' 81° 53.30'	This area has shoaled to 4 feet. Refer to "Feature" on Carlos Pass in this section.
PSI "B" Channel from Carlos Point to Broadway Channel, Chart Letter No. 289	26° 25.00' 81° 53.55' to 26° 21.72' 81° 51.62'	This channel does exist. It was dredged during the construction of State Road 865. The controlling depth is 6 feet. Piles and markers denote this channel

K. COMPARISON WITH CHART (CON'T)

<u>Feature</u>	<u>Position</u>	<u>Remarks</u>
PSI "C" Piles and markers	Survey area	There are many piles throughout the survey area. These were all located by Photo Party #62 and are located on the signal manuscripts and boatsheet. They are indicated as small blue circles on the manuscripts (to serve as Hydro signals, if necessary). All of the pilings should be designated as pilings, not channel markers, because markers are very temporary in nature.
PSI "C" (Con't) Snags	26° 23.32' 81° 51.59'	There are only three permanent snags in the survey area. At times of extreme high tides, shoals and shallow areas catch driftwood and debris but again this condition is temporary in nature. It is recommended that snags at positions given be charted and others be deleted from chart.
	26° 22.67' 81° 52.29'	
	26° 22.68' 81° 52.38'	
Carlos Pass	26° 24.00' 81° 53.50'	This pass should be considered dangerous for large boats, 4 feet draft or more, and entrance should not be attempted without being familiar with the area. The entire area is subject to constant change due to strong tides and currents. There are two

K. COMPARISON WITH CHART (CON'T)

<u>Feature</u>	<u>Position</u>	<u>Remarks</u>
Carlos Pass (con')		natural entrances through Carlos Pass. The north entrance is from latitude 26° 24.00', longitude 81° 53.00' with a controlling depth of 3 feet. The south entrance from a latitude 26° 23.05', longitude 81° 53.20' north-northwest to latitude 26° 23.50', longitude 81° 53.24' has a control depth of 5 feet and to latitude 26° 24.00', longitude 81° 53.00' a control depth of over 8 feet.
Submerged Pipe	26° 23.78' 81° 53.57'	This pipe is submerged 1 foot at MHW. This should be considered a hazard to navigation and charted as such. See Pos.#3688, Vol.# 17, Pg. 64.
Debris along bulkhead	26° 24.69' 81° 53.50' to 26° 24.82' 81° 53.61'	This bulkhead has been rebuilt and considerable debris consisting of steel rods and concrete have been left in the area. At this time the area should be considered foul from 5 meters offshore to the bulkhead extending the length of the bulkhead. See Vol.# 16, page 44.

K. COMPARISON WITH CHART (CON'T)

<u>Feature</u>	<u>Position</u>	<u>Remarks</u>
7 feet least depth in channel	26° 24.22' 81° 55.19'	A least depth of 7 feet was obtained at Pos.# 3792, Vol.#18. Recommend that this be charted.
5 feet least depth in channel	26° 24.15' 81° 55.12'	A least depth of 5 feet was obtained at Pos.#3792, Vol#18. Recommend that this be charted.
Obstruction	26° 21.12' 81° 50.91'	This obstruction is a steel grid laying flat on the bottom and oriented in a east-west direction. The grid is 25 feet long and 12 feet wide. This obstruction should be charted as an obstruction. See Pos.#2320 , Vol.#11
Pipe	26° 21.47' 81° 51.32'	This pipe is submerged at MHW. It was originally used to mark the end of a shoal but no longer serves this purpose. This should be charted as a hazard to navigation. See Pos.#2490 , Vol.#12
Pipe	26° 21.13' 81° 50.85'	This pipe marks the east side of a shoal. See Pos.#2580 , Vol.#12

K. COMPARISON WITH CHART (CON'T)

<u>Feature</u>	<u>Position</u>	<u>Remarks</u>
Submerged Pile at MHW	26° 24.43' 81° 52.43'	This piling was originally located by Photo Party #62. While the survey was in progress, the pile was broken off and should now be considered a hazard to navigation and charted as such. See Pos.#3242 Vol.#15
Piling	26° 24.41' 81° 52.41'	This piling was found laying on the bottom and was taken ashore. This should be deleted from Signal Manuscript TP-00016. See Vol.#19, Pg.# 61.
Debris, in Big Hickory Pass	26° 21.92' 81° 51.70'	This area is constantly cluttered with driftwood and debris, all which is temporary in nature. This condition does make navigation hazardous.
Pile	26° 23.79' 81° 51.27'	This piling should be considered a hazard to navigation. The pile bares only 1 foot at MHW and is very difficult to see. See Pos.#3772 , Vol.# 18
Pier in Ruins	26° 21.58' 81° 50.28'	There exist the ruins of an old pier in this area. It extends 20 meters off shoreline from Signal OWL. See Pos.#2765 Vol.# 13

K. COMPARISON WITH CHART (CON'T)

<u>Feature</u>	<u>Position</u>	<u>Remarks</u>
Oyster Bars and Sand Bars	Survey area	Numerous sand and oyster bars are located and have been shown on the boatsheet. Positions for these can be found through- out the survey volumes.

L. ADEQUACY OF SURVEY

This survey is complete and adequate to supersede prior surveys for charting. No substandard work exists. No further field work is needed in the survey area at this time.

All investigations described in Project SP-AMC-6-HFP-745-70 have been covered by this survey.

M. AIDS TO NAVIGATION

The U.S. Coast Guard maintains no floating or fixed aids to navigation within the limits of this survey. At the present time no formal aids to navigation are in order. The private piles and markers throughout the area are adequate for the use of small craft.

N. STATISTICS

Total positions..... 3796  
Total miles surveyed..... 336.0  
Number of bottom samples..... 44  
Total area surveyed..... 11.7 sq. miles

O. MISCELLANEOUS

No entry

P. RECOMMENDATIONS

It is the opinion of the hydrographer that automated

P. RECOMMENDATIONS (CON'T)

processings could be applied to this survey with excellent results.

TIDE NOTES

Survey H-9148

Tide Station ..... Carlos Point, Florida  
Lat. 26°24.408  
Long. 81°53.00'

Type of Gage ..... Portable Bubbler Automatic  
and staff

Time Meridian ..... 75° West

Plane of Reference ..... Mean Low Water equals 2.2  
feet on 1970 staff

Correction ..... No time or height correc-  
tions were applied when  
calculating tide reducers.

GEOGRAPHIC NAMES LIST

Survey H-9148

Photo Party #62 made no specific investigations on geographic names during this survey. There were no changes to compiled names by Hydrographic Field Party 745.

APPROVAL SHEET

H-9148

(Boatsheet 745-10-2-70)

This survey was accomplished under my overall supervision. The hydrography was done by Terry L Dye, who also wrote the Descriptive Report.

This basic survey is complete and adequate to supersede prior surveys for charting. No substandard work exists.

Approved & Forwarded

TIDE NOTE FOR HYDROGRAPHIC SHEET

December 16, 1970

~~Nautical Chart Division~~ HFP 745

Plane of reference approved ~~to~~  
~~XXXXXXXXXXXXXXXXXXXX~~ for

HYDROGRAPHIC SHEET 9148

Locality: Estero Bay, Florida

Year  
~~XXXXXX~~ 1970

Plane of reference is mean low water

Tide Station Used (Form C&GS-681):

Carlos Point, Florida

Height of Mean High Water above Plane of Reference is as follows:

2.7 feet

Remarks

*J.M. Symons*  
Chief, Tides and Currents Branch
