Coast of North and South Carolina

1972 Field Season

NOAA Ship MT MITCHELL (MSS-22)

Edwin K. McCaffrey  
CAPT, NOAA  
Commanding Officer

A. Project

This survey was conducted along the coast of South Carolina in accordance with Project Instructions, OPR-437-MI-72, Coast of North and South Carolina, dated May 2, 1972.

B. Area Surveyed

The area surveyed is bounded on the west by the shoreline extending from Murrells Inlet to Myrtle Beach, South Carolina. The northern boundary is Latitude 33°39'21"N. The eastern boundary is Longitude 78°46'00"W. The southern boundary passes through the following points:

Latitude 33°31'42"N.	Longitude 79°02'00"W.
Latitude 33°31'09"N.	Longitude 78°55'00"W.
Latitude 33°31'49"N.	Longitude 78°51'00"W.
Latitude 33°31'49"N.	Longitude 78°46'00"W.

Inclusive dates for the survey are August 9, 1972 to September 23, 1972.

C. Sounding Vessel

All of the soundings obtained for this survey were taken by the NOAA Ship MT MITCHELL and Launches MI-3, MI-5 and MI-6.

D. Sounding Equipment

The MT MITCHELL, Launch MI-5 (Plastic Pig), and Launch MI-6 (Uniflite) used the automated HYDROPLOT system. Launch MI-3 (Bertram) ran inshore hydrography using Hyper-Visual control. All of the soundings for this survey were recorded and plotted in feet.

The following equipment was used:

	<u>Ship</u> <u>Ser. No.</u>	<u>MI-3</u> <u>Ser. No.</u>	<u>MI-5</u> <u>Ser. No.</u>	<u>MI-6</u> <u>Ser. No.</u>
Computer, PDP-8E	8E-412	-----	387	8E-853
HYDROPLOT Controller	7605941-3	-----	7605941	7605941-1
Ross Model 4000 Echo Sunder Transducer	1052	-----	1049	201745
Ross Model 5000 Echo Sunder Recorder	1052	-----	1049	201745
Ross Model 6000 Echo Sunder Digitizer	1052	-----	1049	201745
Houston Instruments Model DP-3 Roll Plotter	3750-2	-----	4680-1	4309-1
Hi-Fix Navigation Interface	5	-----	11	6
Hi-Fix Receiver	A-358	A-278	A-273	A-264
Raytheon Model DE-723B Survey Fathometer	-----	1281	-----	-----

The initial was set at zero on all echo sounders. Initial drift due to stylus wear was always re-set to zero. Any variance from the zero initial was applied when the graphic records were scanned.

At times, on the Ross Echo Sounder graphic record, a second

"Initial" appears at 10 feet. This is the indication that the function called "blanking" was in use. It was necessary to use "blanking" on the Ross sounding gear in order for the depth digitizer to operate properly. This function blanks returns above the depth to which it is applied and eliminates stray digitized depths due to return from cavitation bubbles below the transducer. This produces a trace resembling the zero mark at the depth to which "blanking" was applied, but has no effect on the recorded soundings.

The following checks of the Raytheon DE-723B Survey Fathometer were made frequently: A-F Scale Check (with fine arc check), Speed Count, MRV, Initial and Paper Alignment. No corrections were necessary.

The graphic records were scanned by trained personnel, spot checks for errors were made by the Officer-in-Charge of the particular launch used for the day's work, and the Officer-in-Charge of the sheet. These spot checks insured that the data were correctly interpreted in accordance with Paragraphs 1-34, 5-121, and 5-122 of the Hydrographic Manual (20-2).

Velocity corrections and instrument error for all of the launches were determined from bar check data. Bar checks were made at least once a day if weather and sea conditions permitted. An abstract of velocity corrections, one for each launch, is included in this report.

Velocity corrections for the MT MITCHELL were determined by two serial temperature casts made on August 17 and September 9, 1972. An abstract of velocity corrections for the ship is included in this report.

Instrument error for the ship was determined from a vertical cast made on September 19, 1972 in the survey area. An abstract of the vertical cast data is included in this report.

Settlement and squat corrections for the ship were obtained from test runs made on October 8, 1969. An abstract of settlement and squat data is included in this report.

Settlement and squat, and draft data for Launches MI-5 and MI-6 was collected on February 9, 1972, and data for Launch MI-3 was obtained on July 25, 1972. An abstract of the launch settlement and squat data is included in this report.

A draft of 14 feet was assumed for the ship for the initial entry into the HYDROPLOT system. Draft readings were taken at the beginning and end of each trip the ship made to the working grounds. Any difference between the assumed and true draft was applied on the Corrector Tape. An abstract of the ship's draft is included in this report.

Tides were recorded by the Bristol Pressure Recording Tide Gage (Bubbler) at Myrtle Beach, South Carolina. Operation of this gage, during times of sounding operations, was verified by contacting the Tide Gage Observer at Myrtle Beach.

#### E. Smooth Sheet

The smooth sheet for this survey will be prepared by the Atlantic Marine Center, Norfolk, Virginia. The following tapes, with printouts, were furnished to them:

1. Hyperbolic Master Tapes
2. Hyperbolic Corrector Tapes
3. Hyper-Visual Master Tapes
4. Hyper-Visual Corrector Tapes
5. Velocity Correction Tapes
6. TC/TI Tapes
7. ASCII Signal Tape
8. Computer Parameter Tapes

#### F. Control

Control for the MT MITCHELL and Launches MI-5 and MI-6 was hyperbolic Hi-Fix using frequency 1618.650 KHz. The three Hi-Fix stations, located by third-order traverse, were as follows:

Master	BOURBON R.M. 5, 1972	Latitude 33°39'33.20"N. Longitude 78°55'00.95"W.
Slave 1	OKEEFE, 1972	Latitude 33°24'28.72"N. Longitude 79°08'03.35"W.
Slave 2	CABANA, 1969	Latitude 33°49'33.00"N. Longitude 78°38'57.79"W.

Calibrations of Hi-Fix were made at various intervals throughout the day using a three-point visual fix and a check angle.

An average of all Hi-Fix correctors for the day was used as the corrector for that day on the off-line plot.

A sawtooth strip chart recorder was in constant use for the purpose of monitoring lane count.

Control for Launch MI-3 was hyper-visual consisting of a visual angle and one electronic pattern.

For further information concerning the Hi-Fix related control please refer to: "Report on Calibration of Hi-Fix - OPR-437-MI-72, Coast of North and South Carolina" 1972.

All of the visual signals, erected by the MT MITCHELL or Photo Party #62 personnel, were located by third-order traverse. Some of the calibration visual fix objects were triangulation intersection stations.

#### G. Shoreline

The Photogrammetry Section, Atlantic Marine Center, furnished the following T-Sheets to be used as the source of the shoreline. All of the sheets carry the same identification information: Dates of Photography - Dec. 1969, Apr. 1970, Dec. 1970 and Date of Revision - Feb. 1972.

T-12296 (2)

T-12298 (2)

T-12299 (2)

The sheets are labeled "Second Edition" and are Scale 1:20,000.

The shoreline within the limits of hydrography consists entirely of sand beaches.

#### H. Crosslines

Crosslines were run to the extent of 10.0% of the regular system of sounding lines. Agreement between crosslines and regular sounding lines was excellent rarely exceeding one foot.

#### I. Junctions

This survey junctions on the south with H-9102 (WH-20-1-65)

and soundings compare within one foot after the application of velocity corrections.

#### J. Comparison with Prior Surveys

Prior surveys of this area are H-4615 (1925-1926) and H-4616 (1926). Agreement with both surveys is within one foot except in the area near Murrells Inlet. Due to the constant shifting of the bar at the mouth of the inlet there were differences of up to five feet.

This survey agreed within one foot or less with all contemporary surveys adjacent to it: H-9291 (1:40,000) to the south, H-9300 (1:40,000) to the east, and H-9290 (1:20,000) to the north.

#### K. Comparison with Charts

The area covered by this survey was compared with the latest editions of C&GS Charts 1001, 1110, 1237 and 835 SC. Chart 1001 contains no soundings for this area (too shallow - blue tinted area). Chart 1110 agrees within 1-2 feet with the offshore areas of this survey. There was good agreement with Chart 835 SC except for the discrepancy noted in Item 1 - Chart 1237, which follows.

Chart 1237 is the largest scale chart for this area. The soundings on this chart usually agree within 1-2 feet. However, there were two areas where the chart and survey fail to agree.

- (1) At Latitude 33°34'00"N. Longitude 78°59'35"W. C&GS Chart 1237 indicates an 18 foot shoal. Regular hydrographic sounding lines fail to reveal any depth less than 24 feet in this vicinity. (Correction for sound velocity applied).
- (2) At Latitude 33°32'54"N. Longitude 78°56'17"W. The chart indicates a sounding of 21 feet. This pre-survey review item was thoroughly developed. No sounding less than 24 feet was found (Correction for sound velocity applied).

There were two pre-survey review items investigated on this boatsheet. Both are on C&GS Chart 1237. The two pre-survey

review items were investigated while running Development #1. The chart indicates a 21 foot sounding at Latitude 33°32.9'N. Longitude 78°56.3'W. After development the least depth found was 24 feet. At Latitude 33°33.5'N. Longitude 78°56.5'W. a 20 foot charted sounding was verified. In addition, a sounding of 18 feet was located at Latitude 33°33.5'N. Longitude 78°56.9'W. and should be charted.

Development #2 was a sand ridge located at Latitude 33°33.5'N. Longitude 78°55.5'W. The least depth found was 27 feet.

Development #3, at Latitude 33°34.5'N. Longitude 78°59.8'W., was run because a number of strays were recorded on the graphic record while running the system of regular sounding lines adjacent to the beach. The development failed to show any strays at all leading to the belief that the strays were large schools of fish which had been noticed in the area previously.

Development of similar strays on the 1:20,000 scale surveys to the north, using leadline and echo sounder, verified that such strays were, in fact, caused by large schools of fish migrating along parallel to the beach in 15-20 foot depths.

The final development, #4, located at Latitude 33°38.1'N. Longitude 78°54.1'W. was run to prove the existence of a small sand ridge. The ridge was only 2 to 3 feet higher than the bottom surrounding it and, prior to development, the existence of the ridge was questionable.

#### L. Adequacy of the Survey

A small holiday (2 soundings) exists at Latitude 33°31'52"N. Longitude 78°53'48"W. because of a mis-applied Hi-Fix lane corrector used on Day 237. Otherwise, this survey is complete and adequate to supersede all prior surveys of the area. This "holiday" is not critical due to depths and general bottom configuration.

#### M. Aids to Navigation

There are two private aids to navigation within the limits of this survey. The aids are listed in U.S. Coast Guard Light List, Volume II (CG-160), Atlantic and Gulf Coast, 1972.

Surfside Fishing Pier Obstruction Lights (on end of the pier) Light List No. 10 (Page 1)

2 Fixed Red Lights

Latitude  $33^{\circ}36.2'N$ . Longitude  $78^{\circ}58.2'W$ .  
*33°36 1268 78°58 1262 0200*

Garden City Fishing Pier (on end of the pier) Light List No. 11 (Page 1)

2 Fixed Red Lights

Latitude  $33^{\circ}34.5'N$ . Longitude  $78^{\circ}59.8'W$ .  
*33°34 9253 78°59 4916 0160*

N. Statistics

	<u>Ship</u>	<u>MI-3</u>	<u>MI-5</u>	<u>MI-6</u>
Linear Nautical Miles, Sounding Line	468.7	80.4	304.5	98.7
Square Nautical Miles, Area Surveyed	42.0	6.8	23.9	9.8
Number of Positions	1087	523	716	194
Number of Bottom Samples	4	7	24	39
Number of Developments	0	1	2	1

O. Miscellaneous

Due to the depth of the water, the area covered by this survey is out of normal shipping lanes. Many shrimp boats have been observed working in this area.

Sounding volumes labeled "Hydrographic Operations Log" were used by the ship and Launches MI-5 and MI-6 to record data pertinent to the survey.

The boatsheet comprises two Roll Plotter (COMPLIT) sheets annotated A of A, B and B of A, B.

A mylar sheet, covering the surveyed area, contains the junction soundings, prior survey soundings and pre-survey review items. Shoreline, as shown on the T-Sheets is also on this composite sheet. The mylar sheet was forwarded as part of the survey records.

P. Recommendations

None.

Q. Reference to Reports

The 1972 Field Season reports, listed below, should be used as reference for a complete evaluation of this survey.

Report on Calibration of Hi-Fix

Report on Corrections to Echo Soundings

Descriptive Tide Note

OPR-437-MI-72

Coast of North and South Carolina

The tide gage used for this project was a pressure recording tide gage (supervised by the Tides Section, Atlantic Marine Center, Norfolk, Virginia) at Myrtle Beach, South Carolina Latitude  $33^{\circ}41.0'N$ . Longitude  $78^{\circ}53.1'W$ .).

This gage operated using +5 ( $75^{\circ}W$ .) Zone Time. The tide gage was not inspected by the ship. However, in accordance with Project Instructions the tide observer was contacted regularly and reported continuous gage operation for the duration of the project.

Hourly heights for the project are to be furnished by Tides Section, National Ocean Survey, Rockville, Maryland.

ATLANTIC MARINE CENTER

TIDE NOTE

1. Project No: OPR-437      2. Vessel/ ~~Rockville~~ NOAA Ship MT MITCHELL
3. Year: 1972      4. Meridian Time Zone: (GMT) 75°W.
5. Tide Station Name: Myrtle Beach, South Carolina
6. Position: Lat. 33° 41.0' N. Long. 78° 53.1' W.
7. Plane of Reference:  MLW,  MLLW corresponds to 4.53  
feet on the tide staff for the period 7-26-72 to 9-24-72.
8. Hourly Heights:  ~~Standard Gauge~~ <sup>Pressure Recording  
Tide Gauge</sup>, furnished from Rockville.  
 Scaled and logged from field marigrams.
9. Tidal Zoning:  Not applicable.

This ship has just completed Project OPR-437-MI-72, Coast of North and South Carolina. The reference tide gage is the pressure recording tide gage at Myrtle Beach, South Carolina.

It is requested that Tides: Hourly Heights data for the period July 26, 1972 to September 24, 1972, using Greenwich Mean Time, be forwarded to this ship. This data is required to complete Descriptive Reports on five surveys.

The enclosure is forwarded for possible use in computing the requested data.

Pre-Survey Review Soundings - Comparison Sheet

Registry Number H- 9289

Launch MI-3

Boatsheet MI-20-1-72

Julian Day	Volume Number	Charted Soundings (ft.) (#)	Development Number	Position of Shoalest Depth		Comments/Recommendations
				Lat. 33°N.	Long. 78°W.	
266	7	----	3	34.5'	59.8'	This area was developed because of a number of strays on the fathogram. These strays showed while the boat was running regular system of hydrographic sounding lines. The development failed to show any strays at all. Large schools of fish were observed in the area and it is felt that the fish were the cause of the strays.
(32)						NOTE-See the Descriptive Reports covering the Surveys H-9290 and H-9314 (to the north).

Settlement and Squat Abstract

NOAA Ship MT MITCHELL (MSS-22)

Excerpt from Commanding Officer, MT MITCHELL memorandum dated October 29, 1969, "Skeg Transducer Performance".

Another item of interest was the settlement and squat determination. This was run in 52 feet of water, calm with only a slight swell and the data is well within the limits of  $\frac{1}{2}$  foot accuracy. We had a full load of fuel and the draft was 13.8 feet stern, 14.0 feet midships at dockside just before the determination.

Results were:

	<u>Standard Speed</u> 175 RPM	<u>Half Speed</u> 105 RPM
Skeg Transducer	0.8 feet	0.1 feet
Mid-ships Transducer	1.4 feet	0.6 feet

This bears out the past eyeball observations that the MT MITCHELL goes down by the bow considerably when underway. Fuel is always used from the forward tanks first to combat this situation.

Approval Sheet

Field Number MI-20-1-72

Registry Number H-9289

The field work and processing of data from this hydrographic survey was under my immediate daily supervision. The boat sheet and all records have been reviewed and are approved by me.

This survey is complete, within the limits of the hydrography, and adequate to supersede all prior surveys of the area.

  
Edwin K. McCaffrey  
CAPT, NOAA  
Commanding Officer

7/17/73

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION  
NATIONAL OCEAN SURVEY

TIDE NOTE FOR HYDROGRAPHIC SHEET

Processing Division: Atlantic Marine Center

Hourly heights are approved for Long Beach, N.C.

Tide Station Used (NOAA form 77-12): Myrtle Beach, S.C.  
Year 1972

Period: March 28-May 4, 1971

HYDROGRAPHIC SHEET: H-9229 H-9230 H-9260 H-9289 H-9290

OPR: 437

Locality: Coast of South Carolina

Plane of reference (mean ~~lower~~ low water): Long Beach 4.0 ft.  
Myrtle Beach ~~4.6~~ ft.

Height of Mean High Water above Plane of Reference is  
Long Beach 4.8 ft.  
Myrtle Beach 5.1 ft.

Remarks: Zoning

For year 1972 apply Myrtle Beach direct.

Recommend use of multiple gage zoning between Long Beach and Myrtle Beach during the period March 28-May 4, 1971.

*Myrtle Beach  
subtract from hourly heights*

*1970 4.6*

*1971 8.4*

*1972 7.6*

*See instructions with Hubbard 8/10/73. A memo  
will follow. WFT*

NATIONAL OCEAN SURVEY  
Rockville, Md. 20852

Date: November 6, 1973

Reply to  
Attn of: C3311-89-SIP

Subject: Form 712 corrections to plane of reference

To: Director, Atlantic Marine Center, CAM221

Completed tidal summaries for Myrtle Beach, South Carolina indicate tabulations for 1971-1972 should be corrected to mean low water by subtracting 8.4 feet from 1971 hourly heights and 7.6 feet from 1972 values.

The corrections to plane of reference should be applied to Form 712, Hydrographic sheets H-9229, H-9230, H-9260, H-9289 and H-9290.

VERIFICATION NOTES  
SURVEY H-9289

This appears to be an excellent basic survey. Soundings are in good agreement at crossings and the depth curves adequately delineate the features in the area.

Problems encountered during verification and the methods used to resolve them are explained in the accompanying AMC Plotter Notes.

VERIFICATION NOTE TO EDP  
H-9289 (MI 20-1-72)

Personnel of this branch have examined this sheet and are returning it to your office for corrections.

Signal numbers should be plotted to the left of the signals to keep the numbers out of the soundings. <sup>N.W.</sup>

A listing of the actual signals used should be made, as signal 910 falls off the north edge of the sheet. If the signal is used a larger sheet may be required in order to have all signals on the sheet and room on the south edge for the proper border.

Plot the following as triangulation stations: 904, 908, 910.  
All others are topo stations.

After these corrections have been rectified, furnish this office with a preliminary position overlay and preliminary position printout.

  
Hugh L. Proffitt  
Chief, Verification Branch, AMC

Vreifier G.F.Trefethen

NOV.26,1973

This branch has completed verification of the preliminary pos. o/L

The hi-fix correctors for days 236,237,222,227, 240,267 are in error. record nos. 14050-16291.

Vessel ID numbers are in error from pos. 3534-3629. record nos. 14050-14849

Record nos. 17005-17202 time and pos. nos. are out of order.

After the corrections have been applied please furnish this branch a second pos. o/L and add hi-fix lane 1 and 5 on pat. 2 to cover the area of hydro.

Cards have been key punch by this branch  
24 pos. nos. were duplicated.

Delete signals 906 and 908 not used.

H-9289(MI 20-1-72)  
OPR-437  
VERIFIER NOTE TO EDP

This branch has completed verifying the preliminary sounding overlay of this survey. Correction cards have been punched by personnel of this branch, and the cards will accompany the sounding printout to EDP Branch.

The majority of errors were a result of rotation of soundings  $45^{\circ}$ . This rotation was completed after the soundings were excessed. The end result was a great number of soundings touching or the possibility of soundings touching when plotted on the smooth sheet.

After these changes have been made, please furnish this office with a smooth sheet, new excess level I, and a smooth position plot.

VERIFIER'S REPORT  
HYDROGRAPHIC SURVEY, H-9289

**INSTRUCTIONS** - This form serves to identify items of a check list in verification together with items which are separately reported to the Reviewer. The form is not to be forwarded to the Reviewer. A report, which is prepared for the Reviewer, should identify items by number and letter and will be filed in the Descriptive Report until the survey is reviewed.

**CL - Check List Items:** should be checked as having been completed during the verification processes.

**R - Report Item:** This column refers to those items reported to the reviewer and is used to indicate the items discussed.

Part I - DESCRIPTIVE REPORT		CL	R	Part III - JUNCTIONS (Continued)		CL	R
<p><b>Note:</b> The verifier should first read the Descriptive Report for general information and problems.</p> <p>1. The Descriptive Report was consulted, paragraphs checked if found satisfactory, and notations were made in soft black pencil regarding action taken. Remarks Required: -- None</p>				<p>10. Junctions with contemporary surveys were satisfactory except as follows:  Remarks Required: -- Consider conditions after adjustments have been made; note adjustments made. Make special notes of <b>Butt</b> junctions and areas which are <b>SUPERSEDED</b>.</p>			
<p>2. Soundings originating with the survey and mentioned in the Descriptive Report have been verified and checked in soft black pencil, including latitude and longitude, together with position identification. Remarks Required: -- None</p>				<p><b>Part IV - VOLUMES</b> 11. All items affecting the plotting of the survey which are entered in the remarks columns of the sounding records were noted and check marked. In all cases appropriate action was taken and exceptions noted in the volumes.  Remarks Required: -- None</p>			
<p>3. All reference to survey sheets mentioned in the Descriptive Report should include registry number and year. Remarks Required: -- None</p>				<p>12. Condition of sounding records was satisfactory except as follows:  Remarks Required: -- Mention deficiencies in completeness of notes or actions for the following:  (a) rocks (b) line turns (c) position values of beginning and ending of lines (d) bar check or velocity correctors (e) time recording (f) notes or markings on fathograms (g) was reduction of soundings accurately done? (h) was scanning accurate? (i) were peaks at uneven intervals missed? (j) were stamps completed? (k) references to adjacent features</p>			
<p><b>Part II - SHORELINE AND SIGNALS</b> 4. Source of shoreline signals Remarks Required: -- List all surveys  a. Give earliest and latest dates of photographs  b. Field inspection date c. Field Edit date d. Reviewed-Unreviewed</p>				<p><b>Part V - PROTRACTING</b> 13. All positions verified instrumentally were check marked in color in the sounding records, and verifier initialed the processing stamp.  Remarks Required: -- None</p>			
<p>5. The transfer of contemporary topographic information was carefully examined and reconciled with the hydrography. Remarks Required: -- Discuss remaining differences.</p>				<p>14. The protracting and plotting of all unsatisfactory crossings were verified.  Remarks Required: -- None</p>			
<p>6. The plotting of all triangulation stations, topographic stations and hydrographic signals has been checked and noted in processing stamp No. 42 on the smooth sheet. Remarks Required: -- None</p>				<p>15. All detached positions locating critical soundings, rocks, buoys, breakers, obstructions, kelp, etc., were verified and the position numbers are legible.  Remarks Required: -- None</p>			
<p>7. Objects on which signals are located and which fall outside of the high-water line have been described on the sheet.  Remarks Required: -- List those signals still unidentified.</p>							
<p><b>Part III - JUNCTIONS</b> <b>Note:</b> Make a cursory comparison preliminary to inking soundings in area of overlap.  8. All junctions of contemporary or overlapping sheets were transferred in colored ink and overlapping curves were made identical. Remarks Required: -- None</p>							
<p>9. The notation in slanted lettering "JOINS H---- (19 )" was added in colored ink for all verified contemporary adjoining or overlapping sheets. Those not verified are shown in pencil.  Remarks Required: -- None</p>							

Part V - PROTRACTING (Continued)	CL	R	Part VIII - AIDS TO NAVIGATION	CL	R
<p>16. The protracting was satisfactory except as follows:</p> <p>Remarks Required: -- Refers to protracting in general except for specific faults repeated often, or faults in control information, which required considerable replotting or adjustments.</p>			<p>26. All fixed aids located together with those on the contemporary topographic sheets, have been shown on the survey.</p> <p>Remarks Required: -- Conflicts of any nature listed.</p>		
<p>17. The protractor has been checked within the last three months.</p> <p>Remarks Required: -- Date of check, type of protractor and number.</p>			<p>27. All floating aids listed in the Descriptive Report should be verified and checked in soft black pencil, including latitude and longitude and position identification.</p> <p>Remarks Required: -- None</p>		
<p><b>Part VI - SOUNDINGS</b></p> <p>18. All soundings are clear and legible, and critical soundings are a little larger than adjacent soundings.</p> <p>Remarks Required: -- None</p>			<p><b>Part IX - BOATSHEET</b></p> <p>28. The boat sheet was constantly compared with the smooth sheet with reference to notes, position of sounding lines and supplemental information.</p> <p>Remarks Required: -- None</p>		
<p>19. Sounding line crossings were satisfactory except as follows:</p> <p>Remarks Required: -- Discuss adjustments.</p>			<p>29. Heights of rocks awash were correctly reduced and compared with topographic information.</p> <p>Remarks Required: -- Note excessive conflicts with topographic information.</p>		
<p>20. The spacing of soundings as recorded in the records was closely followed;</p> <p>Remarks Required: -- None</p>			<p><b>Part X - GENERAL</b></p> <p>30. All information on the sheet is shown in accordance with figures 82 and 83 in the Hydrographic Manual (Pub. 20-2).</p> <p>Remarks Required: -- None</p>		
<p>21. The scanning, reduction, spacing, plotting of questionable soundings have been verified.</p> <p>Remarks Required: -- None</p>			<p>31. Unnecessary pencil notes have been removed from the sheet.</p> <p>Remarks Required: -- None</p>		
<p><b>Part VII - CURVES</b></p> <p>23. The depth curves have been inspected before inking.</p> <p>Remarks Required: -- By whom was the penciled curves inspected.</p>			<p>32. Degree, minute values and symbols have been checked; also electronic distance arcs have been properly identified and checked on the smooth sheet.</p> <p>Remarks Required: -- None</p>		
<p>24. The low-water line and delineation of shoal areas have been properly shown in accordance with the following:</p> <ul style="list-style-type: none"> <li>a. From T-Sheet in dotted black lines</li> <li>b. From soundings in orange</li> <li>c. Approximate position of sketched curve is dashed orange</li> <li>d. Approximate position of shoal area not sounded in black dashed</li> </ul> <p>Remarks Required: -- None</p>			<p>33. The bottom characteristics are adequately shown.</p> <p>Remarks Required: -- None</p>		
<p>25. Depth curves were satisfactory except as follows:</p> <p>(This statement should not refer to the manner in which the curves were drawn).</p> <p>Remarks Required: -- Indicate areas where curves could not be drawn completely because of lack of soundings. For some inshore areas a general statement is sufficient.</p>			<p><b>Part XI - NOTES TO THE REVIEWER</b></p> <p>34. Unresolved discrepancies and questionable soundings.</p>		
<p>Verified by _____</p>			<p>35. Notation of discrepancies with photogrammetric survey inserted in report of unreviewed photogrammetric survey or on copy.</p>		
			<p>36. Supplemental information.</p>
