DESCRIPTIVE REPORT

TO

ACCOMPANY HYDROGRAPHIC SURVEY H-9350

FIELD NO. HSL-20-1-73

Scale 1:20,000  
Year 1972

NOAA Launch 1257  
LCDR F. T. Smith, OIC

A. PROJECT

This survey was conducted as a part of Project OPR-508 in accordance with Project Instructions OPR-508-HSL-72, Gulf Coast of Florida, dated September 11, 1972.

B. AREA SURVEYED

The following GP's define the corners of the survey:

<u>LATITUDE (north)</u>	<u>LONGITUDE (west)</u>
27 40.0	82 46.4
27 40.0	82 50.8
27 42.2	82 50.8
27 48.0	82 57.7
27 48.0	82 50.0
27 46.1	82 48.7

The adjacent coast is the west coast of Florida. The sheet extends from Pass-A-Grille Channel to about one mile north of Johns Pass.

This survey makes no junction with prior surveys. Junctions are made with the following contemporary surveys:

Registry No. 7971 (1952)  
7968 (1951 - 52)  
8427 (1958)

The survey was during the period 12 December 1972 through 30 January 1973.

C. SOUNDING VESSEL

NOAA Launch 1257 of HFP 746 was the only vessel used to obtain soundings on this boatsheet.

D. SOUNDING EQUIPMENT

Two Raytheon DE-723D's were used as sounding units.

<u>MODEL NUMBER</u>	<u>SERIAL NUMBER</u>
723-40	1904
723-40	37024

Also used with the above sounding units were the following:

- (1) TRACOR - Model number 20 - Precision Frequency - Square Wave - Power Module
- (2) Electronic Cabinet Unit (ECU) - Model Number 723-42 - Serial Number 1910
- (3) Raytheon Digital Depth Monitor - Model 723-41 - Serial Number 37016

These units were used in 9-35 feet of water.

Echo sounding corrections were determined from barchecks.

Faults in the sounding equipment or records included the following:

- (1) Fine Arc - does not coincide with the printed arc on the analog record (fathogram). There is coincidence at top and bottom with approximately 1 mm disagreement at the center. Fine arc comparisons were made daily. For further information see Corrections to Echo Soundings.
- (2) Some portions of the analog trace were missing due to stylus needle not being properly adjusted or because of bad fathometer paper.
- (3) Digital output from the hydroplot controller was erroneous on two days. The problem was that the depths of over 19.9 feet were incorrect in the tens. (i.e. 20.9 read 00.9, etc.) This hardware problem was corrected and the soundings concerned were corrected using the corrector tape.

(4) The gain settings on the bar checks was zero (0) and was between 0 and 3.5 while sounding on line. The gain settings were not consistently noted by the fathometer operators. The digital analog relationship is affected by gain setting and a 0.1 foot variation could exist when gain setting is changed.

Settlement and squat was determined using the "level method." See Corrections to Echo Soundings for abstract on settlement and squat.

#### E. SMOOTH SHEET

The smooth sheet is to be plotted by the Processing Division at the Atlantic Marine Center in Norfolk, Virginia. This division will also plot soundings corrected for velocity and smooth tides.

#### F. CONTROL

Control for the entire survey was by Raydist operating in the range-range mode. The following stations were located by third-order ground methods and were used for the electronic control stations:

<u>STATION</u>	<u>LATITUDE</u>	<u>LONGITUDE</u>
RUSCOE <i>blue</i> .	27-42-28.830	82-44-16.570
STEEL RAYDIST <i>red</i> .	27-56-32.724	82-50-13.464

Calibration was done using the three-point fix-check angle method. The calibration signals were located by ground method and listed in the Appendix. An abstract of the corrections is included in the Appendix.

The following electronic equipment was used in conjunction with a Digital Equipment Corporation PDP/8I computer for electronic positioning.

<u>EQUIPMENT</u>	<u>MODEL NO.</u>	<u>SERIAL NO.</u>	<u>FREQUENCY</u>
Raydist DRS System Navigator	ZA-673	67	3296.495 KHz
C&GS Hydroplot (Marine Digital Navigation Unit Systems, Inc.)			
C&GS Hydroplot (DEC) Controller			

(Note this letter attached at front of Disc. Report.)

G. SHORELINE Shoreline not placed on Smooth Sheet, as per letter dated Feb. 5, 1976 from Robert C. Munson, Associate Director, Office of Marine Surveys & Maps. There is no shoreline on this sheet. The survey was generally run into the 12 foot curve. The inshore area (Phase II) is to be accomplished at another time by an inshore field party.

H. CROSSLINES

Crosslines were run to the extent of 9% of regular sounding lines. Development work was not included as regular sounding line. Differences at crossings were reconciled by reviewing the fathograms. Any difference of 1 foot or more was checked and in most cases was found to be either due to scanning error or computer "rounding" method.

I. JUNCTIONS

Very good agreement was achieved with contemporary Survey No. 7971, scale 1:20,000, dated 1952. Soundings agreed within 1 foot everywhere. Contemporary survey soundings generally deeper when discrepancy exists. Very good agreement with contemporary Survey No. 8427, scale 1:20,000, dated 1958. Soundings within 1 foot of H-9350. The contemporary survey is generally deeper than H-9350.

Very good agreement with contemporary Survey No. 7968, scale 1:20,000 dated 1951 and 1952, except at Latitude 27-46.8, Longitude 82-49.3 where a three foot discrepancy exists. (i.e. 16-17' found amid 19-20' on H-9350). *Smooth Sheet agrees.. CW*

J. COMPARISON WITH PRIOR SURVEYS

... See note below...

- (1) No. 4580, 1:40,000, dated 1924-1926  
24 and 30 foot depth curves appear to have moved to seaward  $\frac{1}{2}$  mile or more over the years.

Shallow submarine valley at Latitude 27-47.7, Longitude 82-50.75 has closed up due to shoaling.

23 foot depth found at 27-46.1, 82-53.5 where prior survey indicates 28 foot.

24 foot shoal found at 27-46.35, 82-55.25 where prior survey indicated 28 foot.

23 foot found at 27-44.2, 82-50.75 that is not indicated on prior survey.

*Note Junctions ... H-7968 (1951.5) and H-9350 (1952. Max. except for discrepancy noted above) - junction was made but curves not matched. Considering the 20 year difference between surveys' it is felt that data on current survey supersedes the earlier data. CW is Smooth Sheet.*

- (2) No. 1557A, 1:40,000, dated 1883  
Generally good comparison. Prior survey's smaller scale, considerably less densification of soundings and the fact that soundings are plotted in fathoms make comparison difficult.

Discrepancies are due to the fact that the prior surveys did not have the great density of soundings that the new survey contains. Also the old survey methods could account for some of this discrepancy. However, the fact that the new survey has not been corrected for the velocity of sound or smooth tides could also account for some of the discrepancy.

The Pre-survey review item at 27-45.65, 82-50.25 was not found to be significant. A least depth at this position was found to be 15' when developing the area.

#### K. COMPARISON WITH THE CHART

The following charts were used for comparison.

<u>CHART</u>	<u>SCALE</u>	<u>PRINT DATE</u>
586	1:40,000	April 22, 1972, 16th Edition
1257	1:80,000	February 5, 1972, 17th Edition

Excellent agreement on inshore end. There is a 2 foot discrepancy at 27-42.15, 82-50.25. A feature (shoal) was found here that is not on the charts. No all soundings between 27°42' 80°50' & 27°43'  
82°51' agree within one foot of charted depths.  
A 3-4 foot discrepancy at 27-43.75, 82-50.9. Feature (shoal) found here not on charts. No all soundings appear to agree within one ft. of charted depth.

A 2-3 foot discrepancy at 27-41.1, 82-43.5. Features were found in this area (shoals) which are not charted.

A 10 foot depth on chart at 27-47.6, 82-51.8 was not found during current survey. Shoalest depth found in this area was 11 foot. However, 10 foot sounding was found approximately 550 meters northwest of charted sounding.

A 9 foot charted sounding at 27-47.5, 82-50.75 was not found during the current survey. The shoalest depth found in this area was 11 foot.

#### L. ADEQUACY OF SURVEY

This survey is considered complete and adequate to supersede prior surveys for charting.

## M. AIDS TO NAVIGATION

There are no Landmarks for Charts and Fixed Aids to Navigation in the project area.

There are no floating aids to navigation in the project area.

## N. STATISTICS

Total number of positions	1446
Total number of nautical miles of sounding line	463.9
Total area in square nautical miles	39.8
Total number of bottom samples	111
Total number of tide stations	1 bubbler

## O. MISCELLANEOUS

The survey area is well trafficed by small craft.

## P. RECOMMENDATIONS

None.

## Q. REFERENCE TO REPORTS

Reports, records and forms not included in the Descriptive Report which will be submitted separately include:

1. Master & Corrector Tapes
2. TC/TI tapes and Velocity Table number tapes
3. Parameter tapes
4. Binary & ASCII signal tapes
5. Master & Corrector tape hardcopy printouts
6. Fathograms
7. Complot sheets "A & B"
8. Recording volume
9. Report on Correction to Echo Soundings
10. Report on Corrections to Electronic Control
11. Report on Horizontal Control

APPROVAL SHEET

All records and data for this survey has been collected under my supervision and examined by me daily for completeness and adequacy.

Respectfully Submitted,

  
Fidel T. Smith  
LCDR, NOAA  
Chief, HFP 746

TIDE NOTE FOR HYDROGRAPHIC SHEET

Processing Division: Atlantic Marine Center:

Hourly heights are approved for Form 362

Tide Station Used (NOAA Form 77-12): Indian Rocks Beach

Period: December, 1972-January, 1973

HYDROGRAPHIC SHEET: H-9350

OPR: 508

Locality: Off the west coast of Florida

Plane of reference (mean ~~lower~~ low water): 2.0 ft. - Dec., 1972  
diurnal 1.3 ft. - Jan., 1973

Height of Mean High Water above Plane of Reference:

2.1 ft.

Remarks: Zone direct

*for James R. Hubbard*  
*Chief, Tides Branch*

TO: Alfred C. Holmes  
Director, Atlantic Marine Center  
Attention: Chief, Processing Division

FROM: Robert C. Munson *Robert C. Munson*  
Associate Director  
Office of Marine Surveys and Maps

SUBJECT: Omission of High Water Line

In accordance with telephone communication with Mr. William L. Jonns on January 29, 1976, hydrographic surveys H-9390, H-9350, and H-9351 of Project OPR-508, Offshore, Florida West Coast, may be considered complete and forwarded to this Office without the application of the mean high water line. Future surveys inshore from these should have the high water line shown.

ATLANTIC MARINE CENTER  
APPROVAL SHEET  
FOR  
AUTOMATED SURVEY H-9350

- A. All revisions and additions made on the smooth sheet during verification have been entered in the magnetic tape records for this survey. A new final position printout has/~~has not~~ been made. A new final sounding printout has/~~has not~~ been made.

Date: Feb. 18, 1977

Signed: William L. James

Title: Chief, Verification Branch

- B. The verified smooth sheet has been inspected, is complete, and meets the requirements of the Hydrographic and AMC Manuals. Exceptions are listed in the verifier's report.

Date: 2-22-77

Signed: R. A. Yandell

Title: Chief, Processing Division

**VERIFIER'S REPORT**  
**HYDROGRAPHIC SURVEY, H - 9350**

**INSTRUCTIONS** - This form serves to identify items of a checklist in verification together with items which are separately reported to the Reviewer. The form is not to be forwarded to the Reviewer. A report, which is prepared for the Reviewer, should identify items by number and letter and will be filed in the Descriptive Report until the survey is reviewed.

**CL - Check List Items:** should be checked as having been completed during the verification processes.

**R - Report Item:** This column refers to those items reported to the reviewer and is used to indicate the items discussed.

<b>Part I - DESCRIPTIVE REPORT</b>  Note: The verifier should first read the Descriptive Report for general information and problems.	<b>CL</b>	<b>R</b>	<b>Part III - JUNCTIONS (Continued)</b>  10. Junctions with contemporary surveys were satisfactory except as follows:  Remarks Required: -- Consider conditions after adjustments have been made; note adjustments made. Make special notes of Butt junctions and areas which are SUPERSEDED. Note in D.R. - curves not identical	<b>CL</b>	<b>R</b>
1. The Descriptive Report was consulted, paragraphs checked if found satisfactory, and notations were made in soft black pencil regarding action taken.  Remarks Required: -- None	X			X	
2. Soundings originating with the survey and mentioned in the Descriptive Report have been verified and checked in soft black pencil, including latitude and longitude, together with position identification.  Remarks Required: -- None	X			X	
3. All reference to survey sheets mentioned in the Descriptive Report should include registry number and year.  Remarks Required: -- None	X			X	
<b>Part II - SHORELINE AND SIGNALS</b>  4. Source of shoreline signals Remarks Required: -- List all surveys					
a. Give earliest and latest dates of photographs  b. Field inspection date  c. Field Edit date  d. Reviewed-Unreviewed	NA				
5. The transfer of contemporary topographic information was carefully examined and reconciled with the hydrography.  Remarks Required: -- Discuss remaining differences.	NA				
6. The plotting of all triangulation stations, topographic stations and hydrographic signals has been checked and noted in processing stamp No. 42 on the smooth sheet.  Remarks Required: -- None	X				
7. Objects on which signals are located and which fall outside of the high-water line have been described on the sheet.  Remarks Required: -- List those signals still unidentified.	NA				
<b>Part III - JUNCTIONS</b>  Note: Make a cursory comparison preliminary to inking soundings in area of overlap.					
8. All junctions of contemporary or overlapping sheets were compared and overlapping curves were made identical.  Remarks Required: -- See note in D.R.	X				
9. The notation in slanted lettering "JOINS H---(19 )" was added in colored ink for all verified contemporary adjoining or overlapping sheets. Those not verified are shown in pencil.  Remarks Required: -- None	X				
<b>Part IV - VOLUMES</b>  11. All items affecting the plotting of the survey which are entered in the remarks columns of the sounding records were noted and check marked. In all cases appropriate action was taken and exceptions noted in the volumes.  Remarks Required: -- None				X	
12. Condition of sounding records was satisfactory except as follows:  Remarks Required: -- Mention deficiencies in completeness of notes or actions for the following:  (a) rocks (b) line turns (c) position values of beginning and ending of lines (d) bar check or velocity correctors (e) time recording (f) notes or markings on fathograms (g) was reduction of soundings accurately done?  (h) was scanning accurate? (i) were peaks at uneven intervals missed? (j) were stamps completed? (k) references to adjacent features				X	
<b>Part V - MACHINE PLOTTING</b>  13. All positions verified instrumentally were check marked in color in the sounding records, and verifier initialed the processing stamp.  Remarks Required: -- None				NA	
14. The plotting of all unsatisfactory crossings was verified.  Remarks Required: -- None				X	
15. All detached positions locating critical soundings, rocks, buoys, breakers, obstructions, kelp, etc., were verified and the position numbers are legible.  Remarks Required: -- None				NA	

<b>Part V - PROTRACTING (Continued)</b>	<b>CL</b>	<b>R</b>	<b>Part VIII - AIDS TO NAVIGATION</b>	<b>CL</b>	<b>R</b>
16. The protracting was satisfactory except as follows:  Remarks Required: -- Refers to protracting in general except for specific faults repeated often, or faults in control information, which required considerable replotting or adjustments.	NA		26. All fixed aids located together with those on the contemporary topographic sheets, have been shown on the survey.  Remarks Required: -- Conflicts of any nature listed.	NA	
17. The protractor has been checked within the last three months.  Remarks Required: -- Date of check, type of protractor and number.	NA		27. All floating aids listed in the Descriptive Report should be verified and checked in soft black pencil, including latitude and longitude and position identification.  Remarks Required: -- None	NA	
<b>Part VI - SOUNDINGS</b>	<b>X</b>		<b>Part IX - BOATSHEET</b>	<b>X</b>	
18. All soundings are clear and legible, and critical soundings are a little larger than adjacent soundings.  Remarks Required: -- None	X		28. The boat sheet was constantly compared with the smooth sheet with reference to notes, position of sounding lines and supplemental information.  Remarks Required: -- None	X	
19. Sounding line crossings were satisfactory except as follows:  Remarks Required: -- Discuss adjustments.	NA		29. Heights of rocks awash were correctly reduced and compared with topographic information.  Remarks Required: -- Note excessive conflicts with topographic information.	NA	
20. The spacing of soundings as recorded in the records was closely followed;  Remarks Required: -- None	X		<b>Part X - GENERAL</b>		
21. The scanning, reduction, spacing, plotting of questionable soundings have been verified.  Remarks Required: -- None	X		30. All information on the sheet is shown in accordance with figures 82 and 83 in the Hydrographic Manual (Pub. 20-2).  Remarks Required: -- None	X	
22. The smooth plotting of soundings was satisfactory except as follows:  Remarks Required: -- Refer to legibility, errors in spacing, and errors in numbers - but not to errors in scanning.	NA		31. Unnecessary pencil notes have been removed from the sheet.  Remarks Required: -- None	X	
<b>Part VII - CURVES</b>			32. Degree, minute values and symbols have been checked; also electronic distance arcs have been properly identified and checked on the smooth sheet.  Remarks Required: -- None	X	
23. The depth curves have been inspected before inking.  Remarks Required: -- By whom was the penciled curves inspected. NA	X		33. The bottom characteristics are adequately shown.  Remarks Required: -- None	X	
24. The low-water line and delineation of shoal areas have been properly shown in accordance with the following:  a. From T-Sheet in dotted black lines b. From soundings in orange c. Approximate position of sketched curve is dashed orange d. Approximate position of shoal area not sounded in black dashed  Remarks Required: -- None	NA		<b>Part XI - NOTES TO THE REVIEWER</b>		
25. Depth curves were satisfactory except as follows:  (This statement should not refer to the manner in which the curves were drawn).  Remarks Required: -- Indicate areas where curves could not be drawn completely because of lack of soundings. For some inshore areas a general statement is sufficient.	NA		34. Unresolved discrepancies and questionable soundings.	X	
Verified by			35. Notation of discrepancies with photogrammetric survey inserted in report of unreviewed photogrammetric survey or on copy.	NA	
Charles Meekins			36. Supplemental information.	NA	

Verification Note  
Category II Survey  
H-9350 (HSL-20-1-72) OPR-508

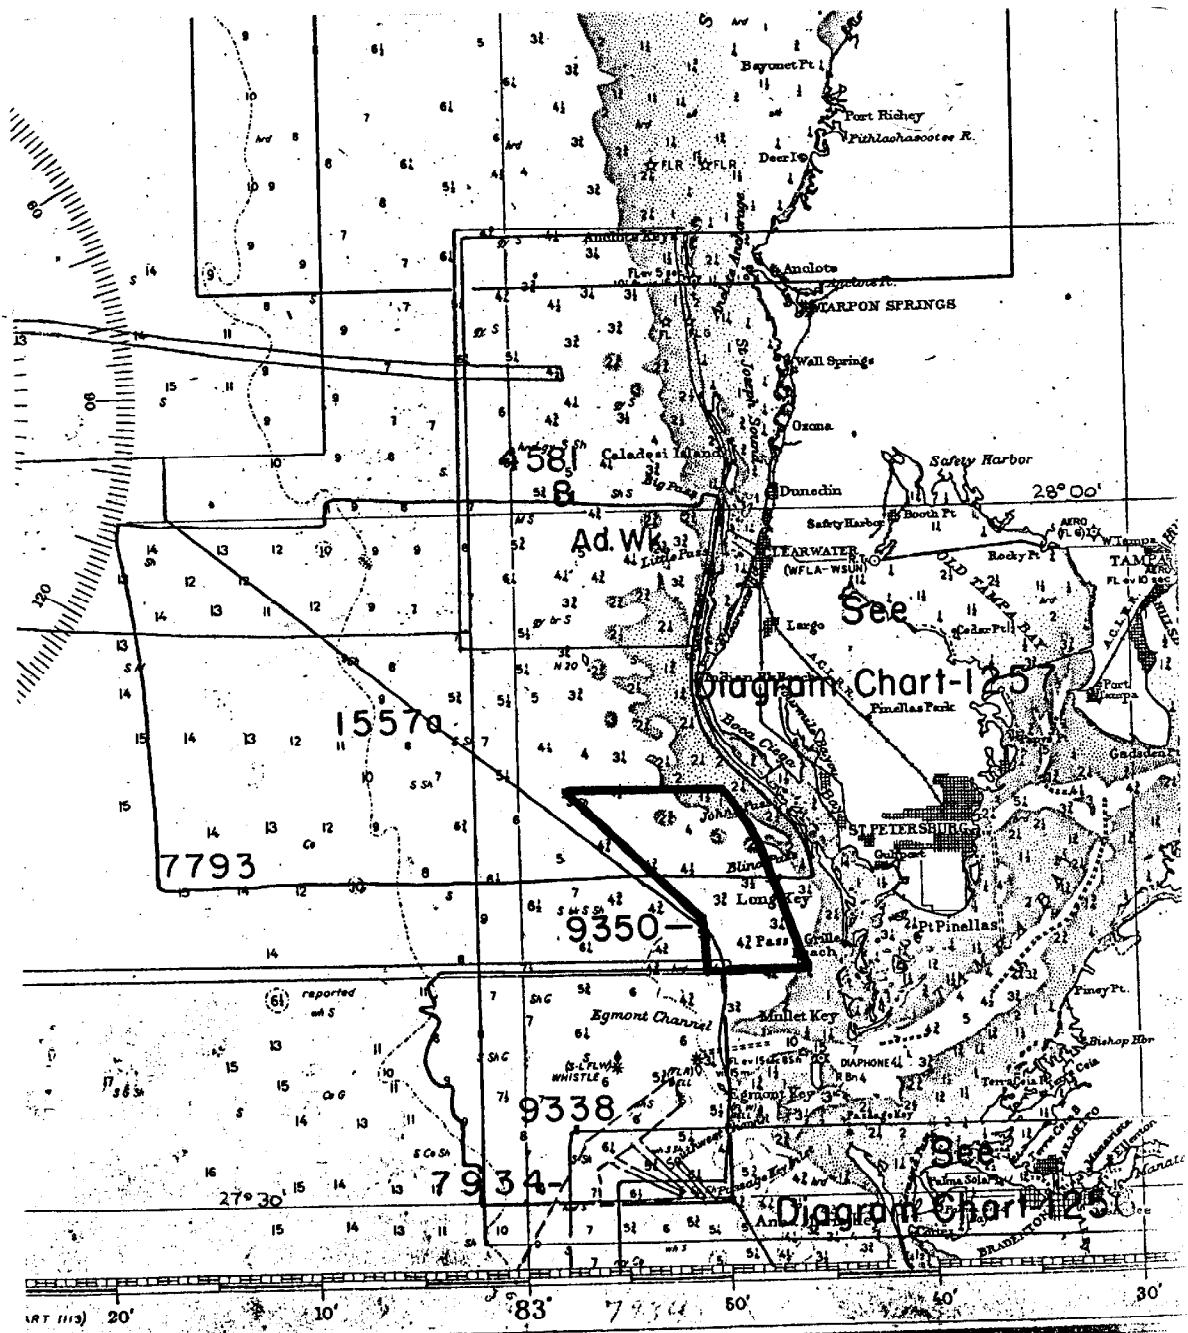

This appears to be an excellent basic survey. Soundings are in good agreement at crossings and the depth curves adequately delineate the features in this area of irregular bottom.

This survey compares favorably with prior surveys H-7968 and H-7971 and the charted depths, and junctions good with H-9351 to the north.

No shoreline was applied to this Smooth Sheet as per memo of C323 dated February 5, 1976.

Norfolk, Virginia  
February 18, 1977

**RECORD OF APPLICATION TO CHARTS**

FILE WITH DESCRIPTIVE REPORT OF SURVEY NO. 9350

## **INSTRUCTIONS**

A basic hydrographic or topographic survey supersedes all information of like nature on the uncorrected chart.  
1. Letter all information.

1. Letter all information.
  2. In "Remarks" column cross out words that do not apply.
  3. Give reasons for deviations, if any, from recommendations made under "Comparison with Charts" in the Review.
