

This survey was conducted using predicted tides based on daily predictions at Pulpit Harbor (Station Number 841-4888). The primary controlling station for this survey was the tide gage at Rockland Harbor (Station No. 841-5490).

Smooth tides were requested from the Chief, Tides and Water Levels Branch (N/OMS2) in a letter dated 7 September 1983. A copy of that letter is included in Appendix D.

Smooth tides and settlement and squat correctors will be applied on the final sheet prepared by the ^{Nautical Chart Branch} ~~Processing Division~~, ^{Pacific} ~~Atlantic~~ Marine Center (MOA23).
