

Predicted tides were based on daily predictions for Rockland, Maine (station number 841-5490) and corrected by a tide gage installed at Belfast, Maine (station number 841-5191). Predicted tides were applied during the sounding operations and off-line processing. Smooth tides were requested from the CHIEF, TIDES AND WATER LEVELS BRANCH (N/OMS12) in a letter dated 2 July 1984 for the period of hydrography.
