

Predicted tide correctors were applied to the soundings plotted on the field sheets for this survey. The tide correctors used were from the 1985 West Coast of North and South America Tide Tables. H-10202 tide correctors are from Juneau, Alaska and are corrected to Kelp Bay per section 5.9 of the project instructions. The height correction range ratio is "x 0.84"; time correction equals minus 0 hours 15 minutes at high water and minus 0 hours 10 minutes at low water. For further information refer to Appendix B, "Field Tide Note".
