

This survey was conducted using predicted tides on-line. Tide tapes were generated using Juneau, Alaska as the reference station and corrected as per project instructions.

The station used for tidal datum determination was Swanson Harbor, Icy Strait, Alaska (945-2368). It was installed and maintained by ship personnel. See the FIELD TIDE NOTE included in Appendix II of this report.

Smooth tides were requested from Chief, Tides and Water Levels Branch (N/OMA12) in a letter dated December 4, 1986. A copy of this letter is included in Appendix XI.
