

Predicted tide correctors were applied to the soundings plotted on the field sheets for this survey. The tide correctors used were from the 1986 West Coast of North and South America Tide Tables. For all soundings, Juneau, Alaska was used directly as the reference station for predicted tides. Leveling before and after survey operations were performed by MT MITCHELL personnel. No tide gages were required to be installed by the FAIRWEATHER. (Note: A Field Tide Note is not appended as all applicable information is included in this section.)
