

The final field sheet was plotted using unverified actual heights reduced to Mean Lower Low Water (MLLW) from heights recorded at the Lynn Haven Tide Station (Station Number 872-9102) except for data from 17 February 1987 (DN 48). Soundings on this date (positions 1922-1964) were plotted using predicted tides when a problem was found with the scanned heights for that day. The tide roll for the month of February had already been forwarded to N/OMA121.

Smooth tides were requested from the Sea and Lake Levels Branch, N/OMA12, in a letter dated March 5, 1987.
