

The final field sheets and rough sheets were plotted using predicted tides using the reference station and correctors designated in the project instructions. Approved tides were requested from the Sea and Lake Levels Branch, N/OMA1212, in a letter dated September 30, 1990. Copies of the field tide level note and request for approved tide levels are included in the appendices of this report.* HDAPS tide tables are included in the separates of this report. *Approved tides and zoning were applied during office processing*

Survey records were scanned by AHP-2 employees. Significant peaks and deeps which occurred between selected soundings, missed depths, incorrectly digitized soundings, and the effects of sea and swell action were corrected while scanning the echograms.
