

## Tide Correctors ✓

The Final Field Sheets were plotted using predicted tides based on San Francisco, California. One tidal corrector zone from the Tide Zone Chart (+4:00 HR HW, +5:00 HR LW, x 0.78 Height Ratio) was applied to all sounding data.

Approved water levels were requested from the <sup>Product and Services</sup> ~~Sea and Lake Levels~~ Branch (N/OES231) in a letter dated December 18, 1992. A copy of this letter is included in Appendix V\*(Tides and Water Levels).

Approved tides were used to correct soundings on the smooth sheet. Tide Note dated February 18, 1993 is attached.
