

** Table No. 3 was used for office processing as designated by the hydrographer. The Pensacola, Florida tide station (872-9840) served as control for datum determination. This station is also the reference station for the predicted tides which were applied to the final field sheet. This survey required a +0 hr 15 minute time corrector with a direct range ratio.

Before final plotting, correctors were applied to all data using the HDAPS REAPPLY program.

Approved tides were requested from the Sea and Lake Levels Branch, N/OES231, in a letter dated December 7, 1993. A copy of the letter is appended to this report.*

Approved tides were used to reduce soundings on the smooth sheet, see attached TIDE FORM.
