

The Willets Point tide station 872-9840, served as control for datum determination. This station is also the reference station for the predicted tides which were applied to the final sounding plot. This survey required a -30-minute time corrector for both high and low tide, and a x1.02 range ratio to be applied to the predicted tides.

The final sounding plot was plotted after reapplying the correctors to each data record using the HDAPS program REAPPLY.

Approved tides were requested from the Sea and Lake Levels Branch, N/OES231, in a letter dated January 9, 1995. A copy of the letter is appended to this report. *APPROVED TIDING AND TIDES WERE APPLIED DURING OFFICE PROCESSING.*
