

6. a. The tidal datum for this survey was mean lower low water (MLLW). The tide station at Galveston Pleasure Pier, Texas (877-1510) was the reference station. The station was inspected and opening and closing levels were run by HECK's crew during the 1994 field season. Opening and closing levels were not required per 1995 updated project instructions. No tide stations were established by HECK in support of this survey.

b. All hydrographic depths have been corrected for predicted tides. Zone correctors were specified in the project instructions. Tidal correctors were applied on line via the HDAPS predicted tide table. *Tides and ~~zone~~ zonings were applied during office processing* *Approved*

c. Zoning was in accordance with project instructions. No zoning was used.
