

## C. VERTICAL AND HORIZONTAL CONTROL *See also H-Cell Report*

Tide and water level corrections were determined and applied in accordance with Attachment #7 of the Statement of Work. Tidal zoning as set forth in the Statement of Work was applied. Data from Port Fourchon, LA (8762075) was used as the primary source of tides, while Grand Isle, LA (8761724) was used as a back up. Because there were no outages at the primary station during the survey, the secondary station was not used for any tidal corrections. The following table shows the tidal zone and correctors that were used for this sheet. Tidal data were processed using the 1983-01 epoch.

To ensure complete coverage, C&C created line files that extended beyond the survey boundary by approximately 150 to 300 meters. The zone definition file provided by CO-OPS had to be altered by C&C in order to cover this area. The result was zones CGM366 and CGM717 being extended along their northwest boundaries by approximately 600 meters. This file was named K354KR2009CORP\_C&C\_Edit.zdf and affects only subarea 1. The image below shows the new .zdf file (black) compared to the old file (orange).

The horizontal datum for the survey is the North American Datum of 1983 (NAD 83). The projection is Universal Transverse Mercator (UTM) Zone 15 North. The vertical datum for the soundings is Mean Lower Low Water (MLLW). ***Concur.***
