

Illustration No. 12. Location of survey area, tide zones, tide stations 8762075 and 8763535 and the time/range correctors for those tide stations.

The majority of data for survey H12332 was collected between August 22 and September 11, 2011; additional investigations and fill-ins were conducted in November and December, 2011. The data logger for station 8763535 was destroyed by Tropical Storm Lee and there is no data between September 2, 2011 and 23:54 UTC and September 16, 2011 at 17:42 UTC. However, the data from both tide stations shows agreement between 8/21 and 9/2, 2011 (Illustration No. 13). The time that the data logger for station 8763535 was disabled affects 3 days of data collected in survey H12332 between September 8 and 10, 2011, mainly in the southeastern portion of the survey area (Illustration No. 14). It was confirmed that the Fourchon station was still operational, and survey operations continued.
