

H12759

U.S. Department of Commerce  
National Oceanic and Atmospheric Administration  
National Ocean Service

**DESCRIPTIVE REPORT**

Type of Survey: Navigable Area

Registry Number: H12759

**LOCALITY**

State(s): Alaska

General Locality: Shumagin Islands

Sub-locality: 10 NM North of Simeonof Island

**2015**

CHIEF OF PARTY  
CDR David J. Zezula, NOAA

**LIBRARY & ARCHIVES**

Date:

U.S. DEPARTMENT OF COMMERCE NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION		REGISTRY NUMBER:
<b>HYDROGRAPHIC TITLE SHEET</b>		<b>H12759</b>
INSTRUCTIONS: The Hydrographic Sheet should be accompanied by this form, filled in as completely as possible, when the sheet is forwarded to the Office.		
State(s):	<b>Alaska</b>	
General Locality:	<b>Shumagin Islands</b>	
Sub-Locality:	<b>10 NM North of Simeonof Island</b>	
Scale:	<b>40000</b>	
Dates of Survey:	<b>05/16/2015 to 05/25/2015</b>	
Instructions Dated:	<b>04/06/2015</b>	
Project Number:	<b>OPR-P183-FA-15</b>	
Field Unit:	<b>NOAA Ship Fairweather</b>	
Chief of Party:	<b>CDR David J. Zezula, NOAA</b>	
Soundings by:	<b>Multibeam Echo Sounder</b>	
Imagery by:	<b>Multibeam Echo Sounder Backscatter</b>	
Verification by:	<b>Pacific Hydrographic Branch</b>	
Soundings Acquired in:	<b>meters at Mean Lower Low Water</b>	
Remarks: <i>The purpose of this survey is to provide contemporary surveys to update National Ocean Service (NOS) nautical charts. All separates are filed with the hydrographic data. Any revisions to the Descriptive Report (DR) generated during office processing are shown in bold red italic text. The processing branch maintains the DR as a field unit product, therefore, all information and recommendations within the body of the DR are considered preliminary unless otherwise noted. The final disposition of surveyed features is represented in the OCS nautical chart update products. All pertinent records for this survey, including the DR, are archived at the National Centers for Environmental Information (NCEI) and can be retrieved via <a href="http://www.ncei.noaa.gov/">http://www.ncei.noaa.gov/</a>.</i>

## **Descriptive Report to Accompany Survey H12759**

Project: OPR-P183-FA-15

Locality: Shumagin Islands

Sublocality: 10 NM North of Simeonof Island

Scale: 1:40000

May 2015 - May 2015

**NOAA Ship Fairweather**

Chief of Party: CDR David J. Zezula, NOAA

### **A. Area Surveyed**

The survey area is located in the Shumagin Islands with the sub-locality of 10 NM north of Simeonof Island.

#### **A.1 Survey Limits**

Data were acquired within the following survey limits:

<b>Northwest Limit</b>	<b>Southeast Limit</b>
55° 12' 10.08" N 159° 14' 18.54" W	54° 59' 46.74" N 159° 5' 9.24" W

*Table 1: Survey Limits*

Figure 1: Survey area coverage

Survey limits were acquired in accordance with the requirements in the Project Instructions and the National Ocean Service Hydrographic Surveys Specifications and Deliverables (HSSD) dated approved April 2014.

## A.2 Survey Purpose

The purpose of this survey is to support safe navigation and to update nautical charts, the area is navigationally significant and a critical survey priority. In addition, soundings will support a new, larger scale navigation chart.

## A.3 Survey Quality

The entire survey is adequate to supersede previous data.

## A.4 Survey Coverage

The following table lists the coverage requirements for this survey as assigned in the project instructions:

Water Depth	Coverage Required
All waters	Complete MBES with backscatter OR 100% SSS with concurrent set line spacing MBES with backscatter.

Survey coverage was in accordance with the requirements in the Project Instructions and the HSSD.

Figure 2: Survey Outline

## A.5 Survey Statistics

The following table lists the mainscheme and crossline acquisition mileage for this survey:

	<b>HULL ID</b>	<i>S-220</i>	<i>2807</i>	<i>Total</i>
<b>LNM</b>	<b>SBES Mainscheme</b>	0	0	0
	<b>MBES Mainscheme</b>	457.720	3.773	461.493
	<b>Lidar Mainscheme</b>	0	0	0
	<b>SSS Mainscheme</b>	0	0	0
	<b>SBES/SSS Mainscheme</b>	0	0	0
	<b>MBES/SSS Mainscheme</b>	0	0	0
	<b>SBES/MBES Crosslines</b>	30.506	0	30.506
	<b>Lidar Crosslines</b>	0	0	0
<b>Number of Bottom Samples</b>				3
<b>Number Maritime Boundary Points Investigated</b>				0
<b>Number of DPs</b>				0
<b>Number of Items Investigated by Dive Ops</b>				0
<b>Total SNM</b>				61.92

*Table 2: Hydrographic Survey Statistics*

The following table lists the specific dates of data acquisition for this survey:

<b>Survey Dates</b>	<b>Day of the Year</b>
05/16/2015	136
05/17/2015	137

<b>Survey Dates</b>	<b>Day of the Year</b>
05/18/2015	138
05/21/2015	141
05/22/2015	142
05/23/2015	143
05/25/2015	145

*Table 3: Dates of Hydrography*

Survey Statistics were calculated in Pydro64.

## **B. Data Acquisition and Processing**

### **B.1 Equipment and Vessels**

Refer to the Data Acquisition and Processing Report (DAPR) for a complete description of data acquisition and processing systems, survey vessels, quality control procedures and data processing methods. Additional information to supplement sounding and survey data, and any deviations from the DAPR are discussed in the following sections.

#### **B.1.1 Vessels**

The following vessels were used for data acquisition during this survey:

<b>Hull ID</b>	<b><i>S-220</i></b>	<b><i>2807</i></b>
<b>LOA</b>	70.41 meters	8.64 meters
<b>Draft</b>	4.88 meters	1.12 meters

*Table 4: Vessels Used*

## B.1.2 Equipment

The following major systems were used for data acquisition during this survey:

<b>Manufacturer</b>	<b>Model</b>	<b>Type</b>
Reson	7125	MBES
Kongsberg	EM 710	MBES
Seabird	19plus	Conductivity, Temperature, and Depth Sensor
Reson	SVP70	Sound Speed System
Reson	SVP71	Sound Speed System
Applanix	POS/MV V4	Positioning and Attitude System
Brooke Ocean Technology Ltd	MVP200	Conductivity, Temperature, and Depth Sensor

*Table 5: Major Systems Used*

## B.2 Quality Control

### B.2.1 Crosslines

Crosslines acquired for this survey totaled 6.61% of mainscheme acquisition.

Surface differencing in CARIS HIPS was used to assess crossline agreement with mainscheme lines. An 8m resolution surface with only mainscheme lines was differenced and compared to an 8m resolution surface made with only crosslines. This surface is submitted digitally in the Separates/II\_Digital\_Data folder. The two surfaces had a deviation of +/- 0.30m at the 95% confidence level which is within the Total Vertical Uncertainty (TVU).

Figure 3: Crossline comparison statistics

### B.2.2 Uncertainty

The following survey specific parameters were used for this survey:

Measured	Zoning	Method
0.01 meters	0.08 meters	Discrete Zoning

Table 6: Survey Specific Tide TPU Values

Hull ID	Measured - CTD	Measured - MVP	Surface
S-220		1 meters/second	0.5 meters/second
2807	2.0 meters/second		0.5 meters/second

*Table 7: Survey Specific Sound Speed TPU Values*

### B.2.3 Junctions

The areas of overlap between surveys were reviewed in CARIS HIPS and SIPS by surfacing differencing eight meter and sixteen meter combined surfaces to assess surface agreement. The junction agreement is generally within the total allowable vertical uncertainty in their common areas and depths for all surfaces. Data overlap between all surveys was achieved. See figure 4 for planned areas of overlap.

The following junctions were made with this survey:

Registry Number	Scale	Year	Field Unit	Relative Location
H12758	1:40000	2015	NOAA Ship FAIRWEATHER	W
H12760	1:40000	2015	NOAA Ship FAIRWEATHER	E
H12780	1:40000	2015	NOAA Ship FAIRWEATHER	SE
H12474	1:40000	2015	NOAA Ship RAINIER	S

*Table 8: Junctioning Surveys*

### H12758

The junction between Surveys H12759 and H12758 were compared using combined surfaces. The two surfaces generally agreed within 0.22m as seen in the junction surface statistics in Figure 5.

Figure 5: Statistical Information for H12759\_H12758\_Difference.csar

## H12760

The junction between Surveys H12759 and H12758 were compared using combined surfaces. The two surfaces generally agreed within 0.26m as seen in the junction surface statistics in Figure 7. The two surfaces were found to differ by as much as 1.5m in the northern area of the junction as seen in Figure 6.

Figure 7: Statistical Information for H12759\_H12760\_Difference.csar

## H12780

The junction between Surveys H12759 and H12780 were compared using combined surfaces. The two surfaces generally agreed within 0.25m as seen in the junction surface statistics in Figure 9.

Figure 8: H12759\_H12780 Differencing Surface Overview

Figure 9: Statistical Information for H12759\_H12780\_Difference.csar

#### H12474

The junction between Surveys H12759 and H12474 were compared using combined surfaces. The two surfaces generally agreed within 0.24m as seen in the junction surface statistics in Figure 11.

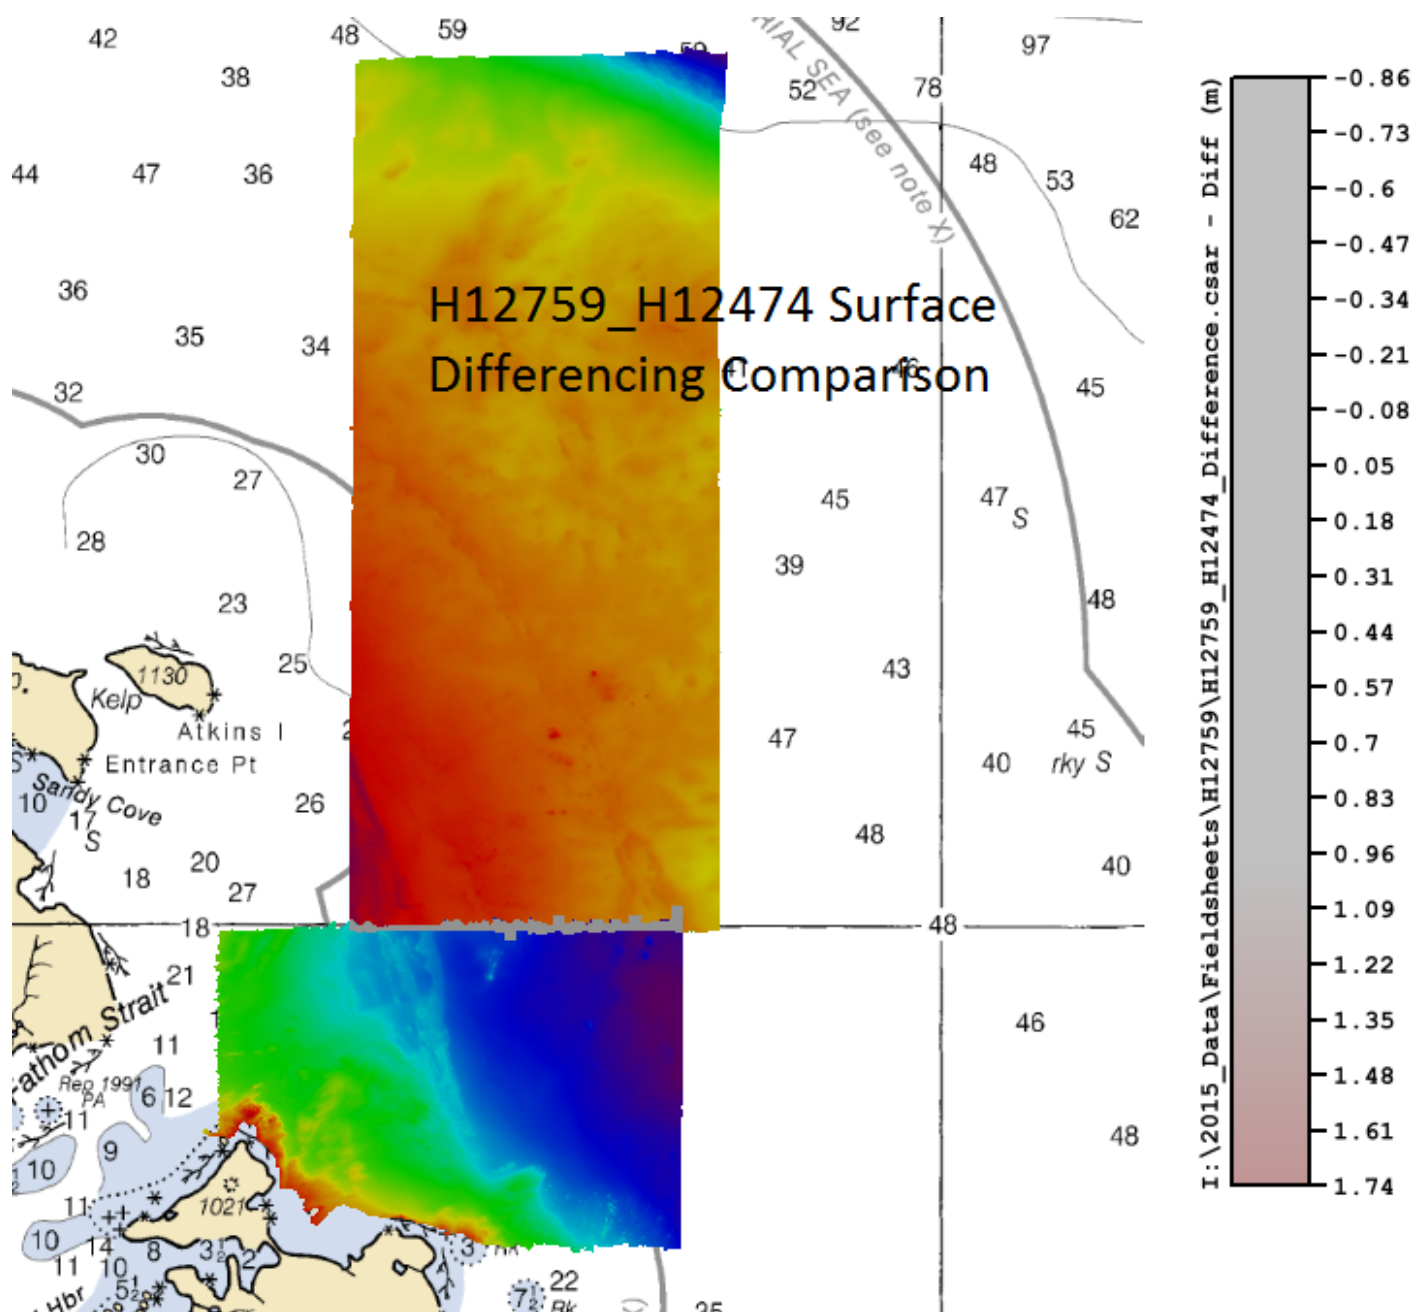

Figure 10: H12759\_H12474 Differencing Surface Overview

Figure 11: Statistical Information for H12759\_H12474\_Difference.csar

#### B.2.4 Sonar QC Checks

Sonar system quality control checks were conducted as detailed in the quality control section of the DAPR.

#### B.2.5 Equipment Effectiveness

There were no conditions or deficiencies that affected equipment operational effectiveness.

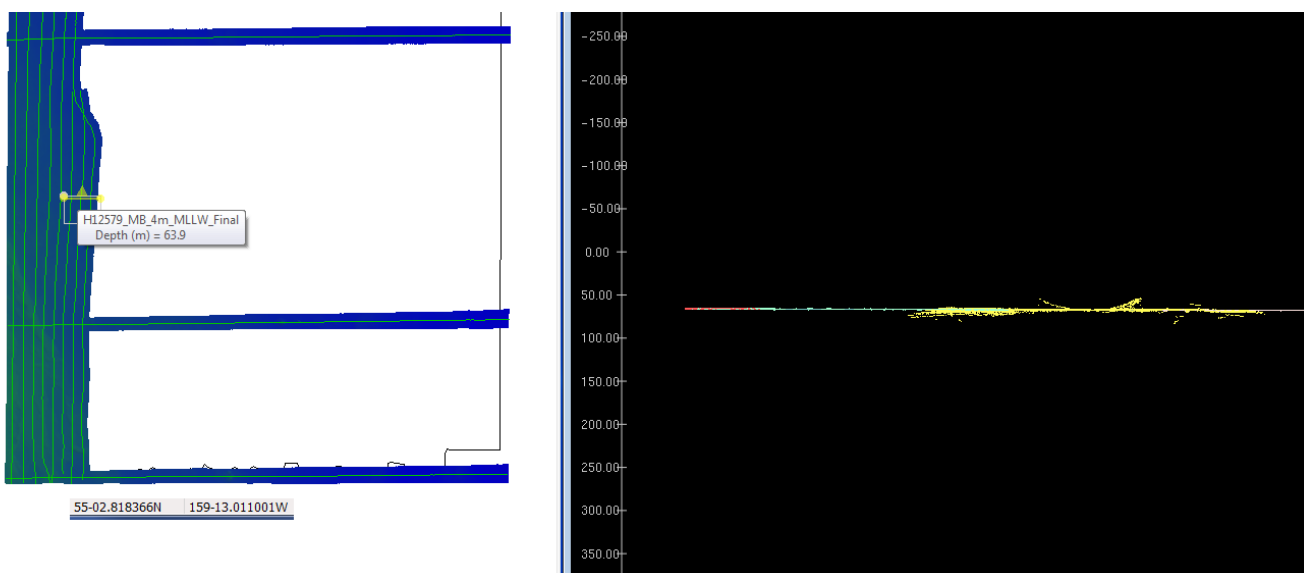

## B.2.6 Factors Affecting Soundings

### Sea State

Acquisition on survey H12759 occurred in foul weather, with the most notable rough weather occurring on day 136 with seas averaging 7 ft and day 142 with seas averaging 6 ft. The rough weather resulted in sonar "blow-outs." The data was examined in CARIS HIPS and SIPS and the fliers were deleted to reduce the impact on the surface.

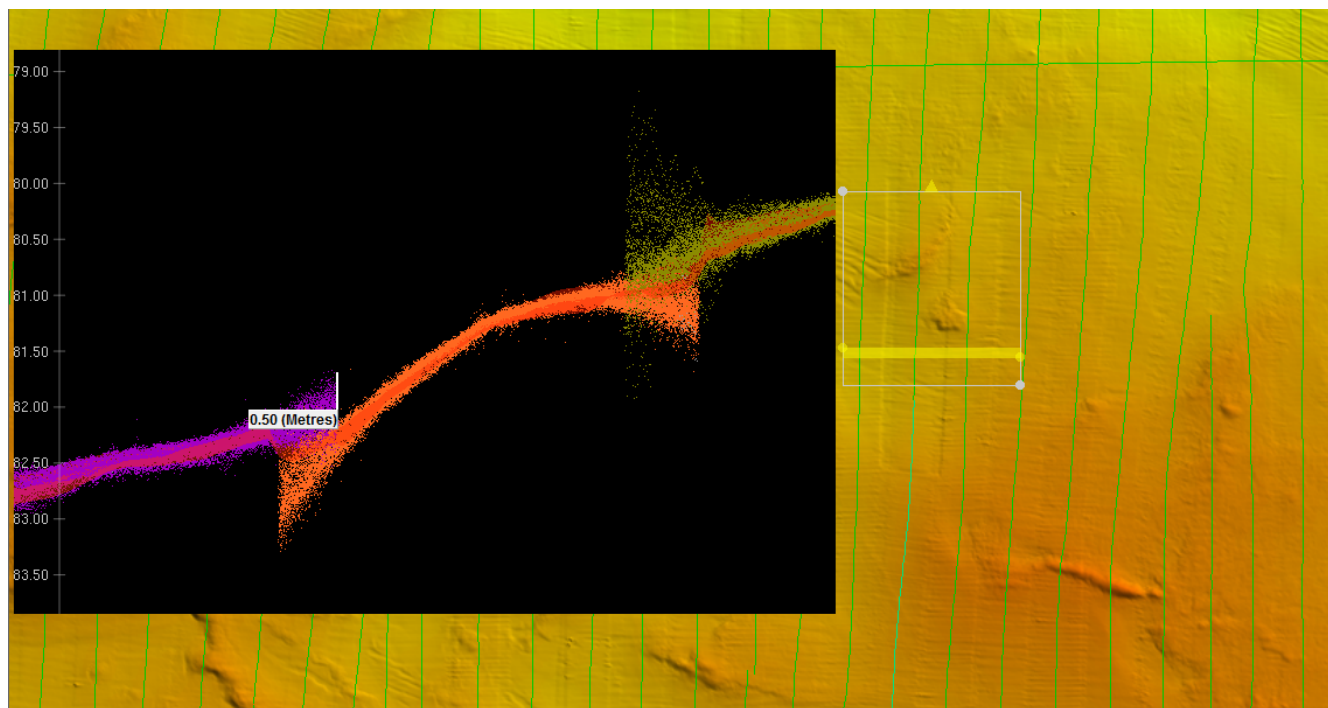

*Figure 12: Day 136 sonar blowout*

*Figure 13: Day 136 sonar blowout*

### Sound velocity

A sound velocity offset exists in the northeastern area of the sheet. Despite this offset, the total vertical uncertainty did not exceed IHO specifications.

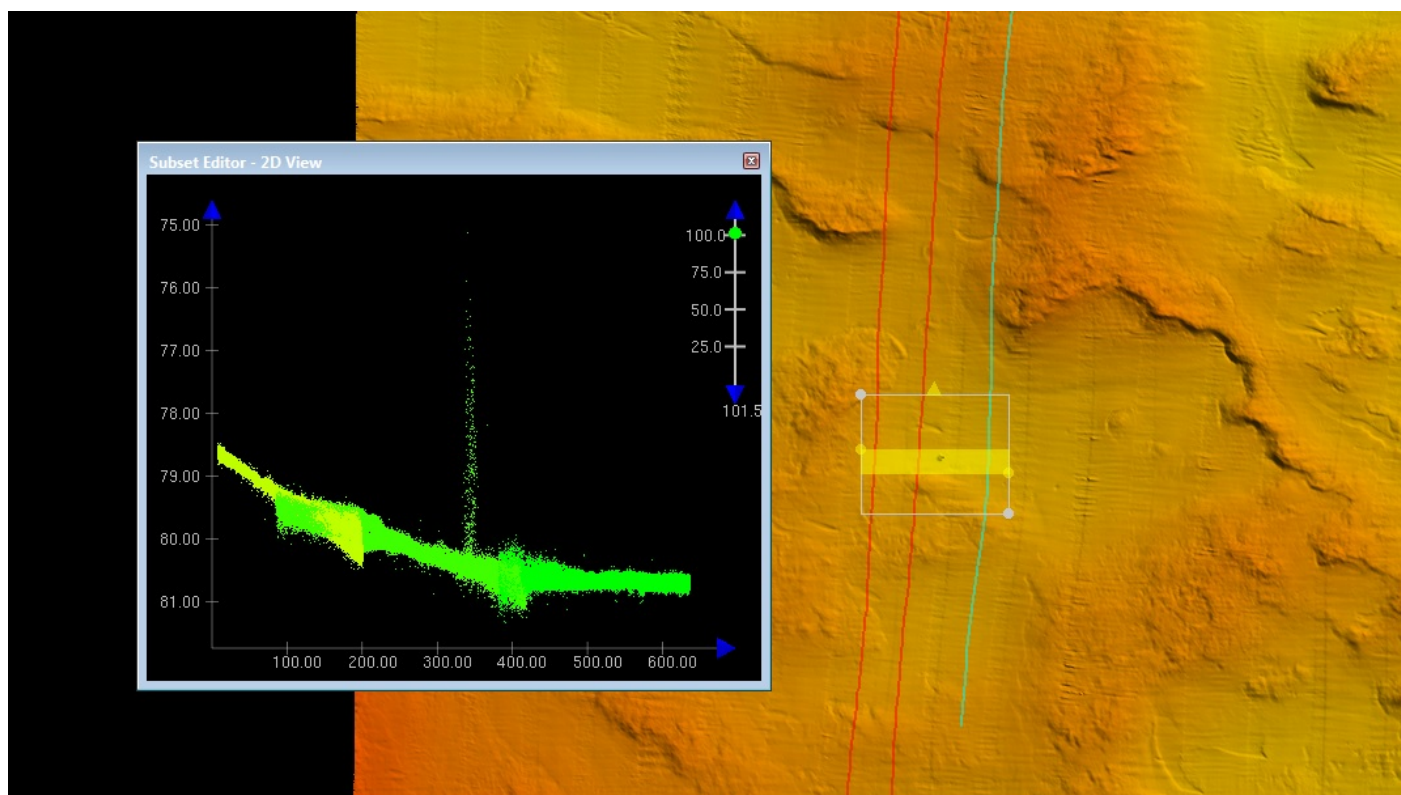

*Figure 14: Sound velocity offset*

### Kelp

Kelp was observed both during acquisition and in the corresponding survey data, mostly in rocky areas. Figure 15 below highlights one of these areas where kelp was observed in the data. In cases where the CUBE surface correctly represented the sea floor, the data was not cleaned out.

*Figure 15: Kelp*

### **B.2.7 Sound Speed Methods**

Sound Speed Cast Frequency: A Moving Vessel profiler was used for Sound Speed Measurement, casts were done at a frequency of 15-30 minutes for the majority of the survey. On day 136 there was a gap where the Moving Vessel Profiler was not available due to mechanical issues at the end of the day and casts were done manually every two hours, however it did not result in any significant sound speed issues. Manual CTD casts were conducted at least every two hours during launch acquisition on day 145.

### **B.2.8 Coverage Equipment and Methods**

All equipment and survey methods were used as detailed in the DAPR.

**B.2.9 Holiday Assessment**

There were no data holidays within the sheet limits of survey H12759. Holidays were assessed according to the May 2015 HSSD. See project correspondence folder for the email from HSD OPS.

**B.2.10 Density**

Density requirements were met with at least 99.97% of nodes containing 5 or more soundings. See Figures 17, 18, and Standard Compliance Review in Appendix II.

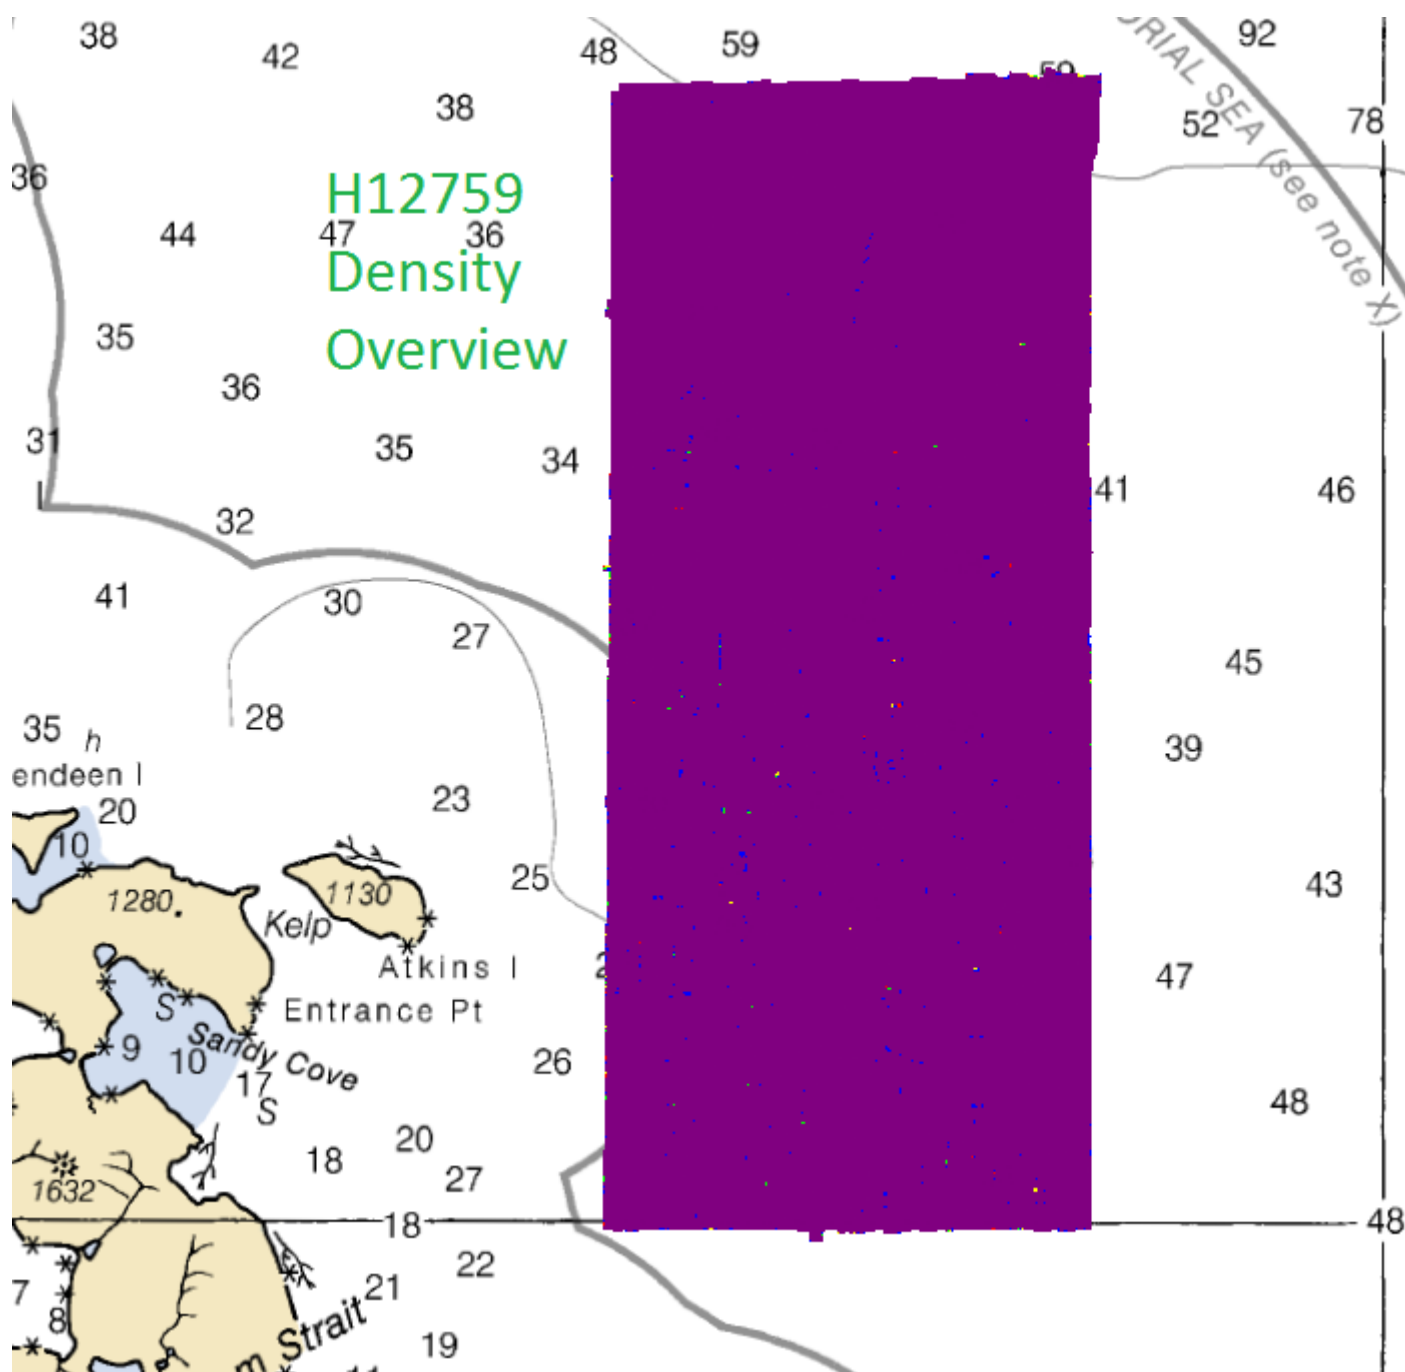

Figure 16: Overview of H12759\_MB\_8m\_MLLW\_Combined.csar density

## Object Detection Coverage

H12759\_MB\_4m\_MLLW\_Final.csar: 99.97% nodes pass (8708303/8710500)

min=1, 5%=37, 25%=42, mode=42, median=50, 75%=78, 95%=112, max=314

Figure 17: Statistical information for H12759\_MB\_4m\_MLLW\_Final.csar density

Figure 18: Statistical information for H12759\_MB\_8m\_MLLW\_Final.csar density

### B.2.11 IHO Uncertainty

The data meet the accuracy specifications as stated in the NOS Hydrographic Surveys Specifications and Deliverables (HSSD) dated April 2014. It was found that 100% of nodes in the finalized 8-meter grid meet or exceed IHO specifications. It was found that 99.99% of nodes in the finalized 4-meter grid meet or exceed IHO specifications. See Figures 20, 21 and the Standards Compliance Review in Appendix II. To assess vertical uncertainty standards, a child layer titled "IHO\_1" was created for the 4-meter, and the 8-meter finalized surfaces and an "IHO\_2" child layer was created for the 8-meter finalized surface using the equations as stated in section B.2.1.1 of the DAPR.

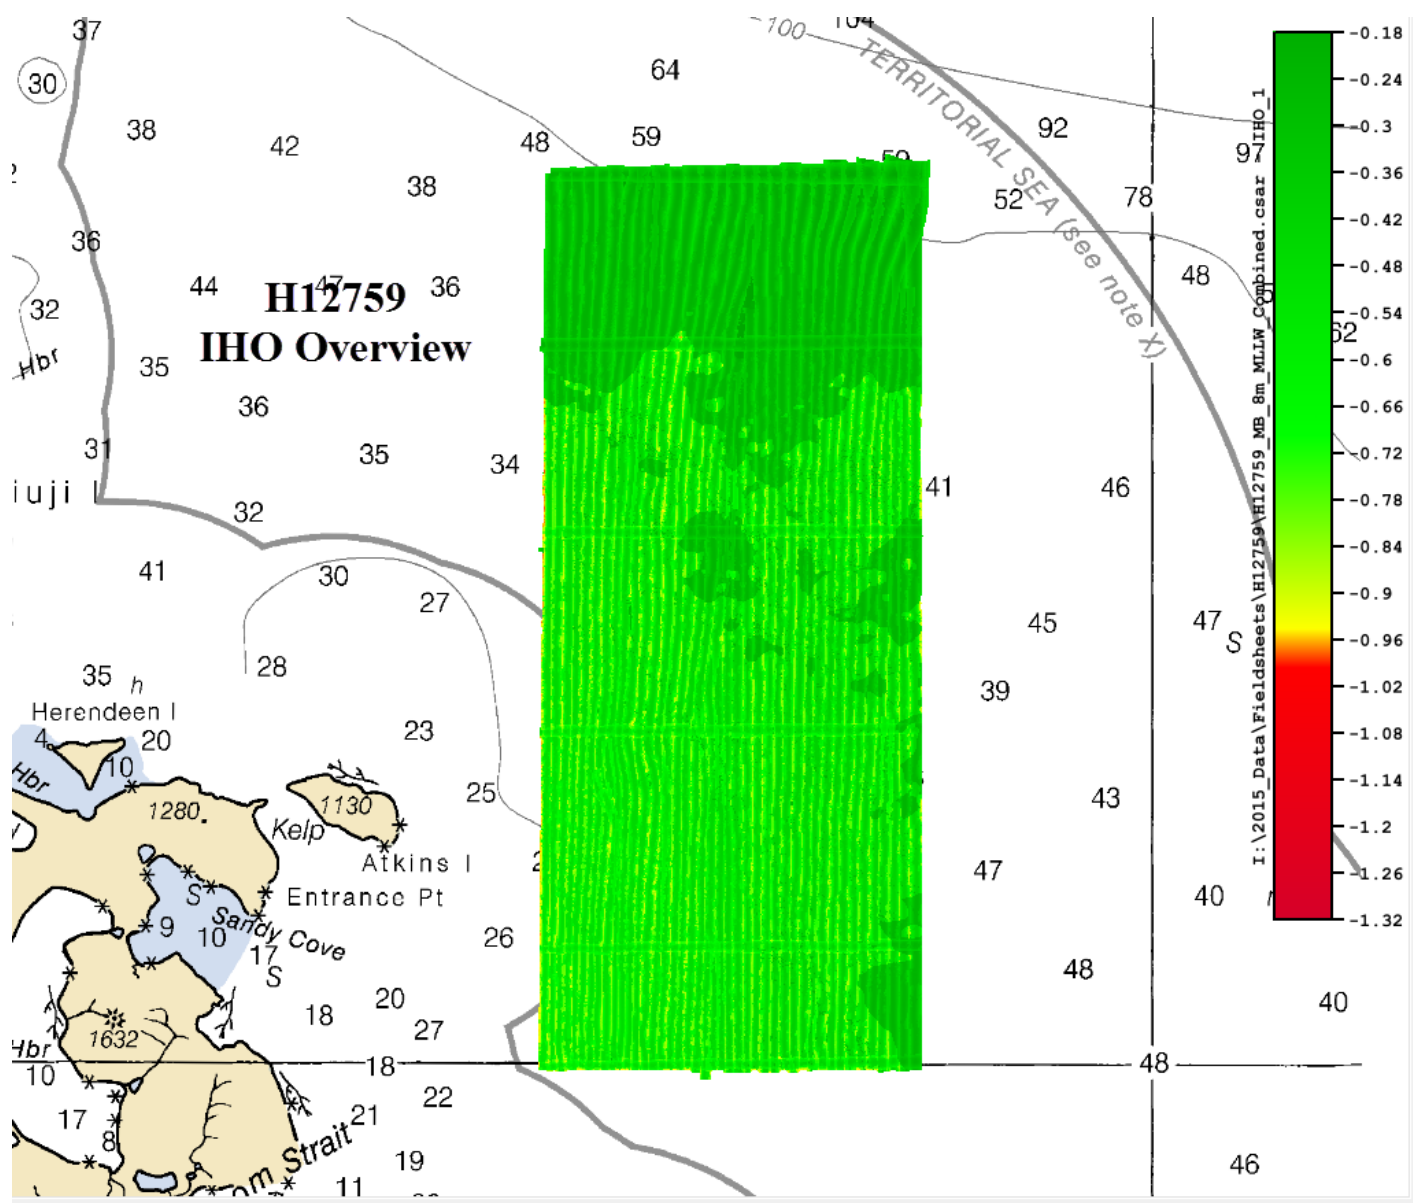

Figure 19: IHO Overview

## Uncertainty Standards

H12759\_MB\_4m\_MLLW\_Final.csar: 99.99% nodes pass (8709945/8710500)

min=0.24, 5%=0.41, 25%=0.46, median=0.55, mode=0.56, 75%=0.70, 95%=0.82, max=1.85

Figure 20: Statistical information for H12759\_MB\_4m\_MLLW\_Final.csar uncertainty

Figure 21: Statistical information for H12759\_MB\_8m\_MLLW\_Final.csar uncertainty

## B.3 Echo Sounding Corrections

### B.3.1 Corrections to Echo Soundings

All data reduction procedures conform to those detailed in the DAPR.

### B.3.2 Calibrations

All sounding systems were calibrated as detailed in the DAPR.

## B.4 Backscatter

Raw Backscatter was logged as a .7k file for Reson 7125 data, and in the .all files for Kongsberg EM710 data. Backscatter data has been sent to the Processing Branch alongside this survey. One line per day of backscatter was processed in the field by the field unit.

## B.5 Data Processing

### B.5.1 Primary Data Processing Software

The following Feature Object Catalog was used: NOAA Profile Version 5.3.3

### B.5.2 Surfaces

The following surfaces and/or BAGs were submitted to the Processing Branch:

Surface Name	Surface Type	Resolution	Depth Range	Surface Parameter	Purpose
H12759_MB_4m_MLLW	CUBE	4 meters	-	NOAA_4m	Complete MBES
H12759_MB_8m_MLLW	CUBE	8 meters	-	NOAA_8m	Complete MBES
H12759_MB_4m_MLLW_Final	CUBE	4 meters	36 meters - 80 meters	NOAA_4m	Complete MBES
H12759_MB_8m_MLLW_Final	CUBE	8 meters	72 meters - 160 meters	NOAA_8m	Complete MBES
H12759_MB_8m_MLLW_Combined	CUBE	8 meters	-	NOAA_8m	Complete MBES

*Table 9: Submitted Surfaces*

The NOAA CUBE parameters mandated in HSSD were used for the creation of all CUBE Base surfaces in survey H12759. The surfaces have been reviewed for noisy data or "fliers" and these spurious soundings have been removed when they caused the surface to be shoaler or deeper than the reliably measured seabed by a distance greater than the maximum allowable Total Vertical Uncertainty at depth. After rejecting noisy data "fliers," surfaces were recomputed to accurately represent the sea floor.

### B.5.3 Data Logs

Data acquisition and processing notes are included in the acquisition and processing logs, and additional processing such as final tide and sound velocity application is noted in the H12759 data log spreadsheet submitted in the Separates folder.

### B.5.4 Critical Soundings

Designation of soundings followed procedures as outlined in section 5.2.1.2 of the HSSD. Survey H12759 did not require designated soundings.

### B.5.5 Disabled beams during CARIS conversion

During conversion in CARIS some beams were automatically disabled causing some areas of low density. In low density areas these rejected soundings were re-accepted. The surface accurately represents the sea floor with no density holidays.

## C. Vertical and Horizontal Control

Additional information discussing the vertical or horizontal control for this survey can be found in the accompanying HVCR.

### C.1 Vertical Control

The vertical datum for this project is Mean Lower Low Water.

#### Standard Vertical Control Methods Used:

ERZT

The following National Water Level Observation Network (NWLON) stations served as datum control for this survey:

Station Name	Station ID
Sand Point, AK	9459450

*Table 10: NWLON Tide Stations*

File Name	Status
9459450.tid	Final Approved

Table 11: Water Level Files (.tid)

File Name	Status
P183FA2015CORP_Reg.zdf	Final

Table 12: Tide Correctors (.zdf or .tc)

A request for final approved tides was sent to N/OPS1 on 05/29/2015. The final tide note was received on 06/08/2015.

Preliminary zoning was accepted as final.

#### Non-Standard Vertical Control Methods Used:

Constant Separation

#### Ellipsoid to Chart Datum Separation File:

The constant separation model file was applied in accordance with the FPM. Separation model was used for the vertical transformation of ellipsoid-referenced data to MLLW and was applied for data submission. Soundings were merged in CARIS HIPS and SIPS using the Apply GPS Tide function, and TPU was computed with the new separation model uncertainty value. See correspondence in Appendix II for additional information on separation model use and approval.

***A Constant Separation model was not used for reduction to chart datum. ERZT and the associated separation model were used.***

## **C.2 Horizontal Control**

The horizontal datum for this project is North American Datum of 1983 (NAD83).

The projection used for this project is UTM zone 4 North.

#### The following PPK methods were used for horizontal control:

Single Base

Vessel Kinematic data was post processed using the Applanix POSPac processing software and the Single Base method was used as described in the DAPR. Smoothed Best Estimates of Trajectory (SBET) and associated error (RMS) data were applied to all MBES data in CARIS HIPS.

The following user installed stations were used for horizontal control:

HVCR Site ID	Base Station ID
9677	Forsman

*Table 13: User Installed Base Stations*

Differential correctors from the US Coast Guard beacon at Cold Bay (289kHz) were used during real time acquisition.

The following DGPS Stations were used for horizontal control:

DGPS Stations
Cold Bay, AK (289kHz)

*Table 14: USCG DGPS Stations*

## D. Results and Recommendations

### D.1 Chart Comparison

A comparison was made between survey H12759 and chart 16540 and US3AK50M using CARIS soundings and contours layers derived from the 8 meter combined surface. The contours and soundings were overlaid on the chart to assess differences. All data from H12759 should supersede charted data.

### D.1.1 Raster Charts

The following are the largest scale raster charts, which cover the survey area:

<b>Chart</b>	<b>Scale</b>	<b>Edition</b>	<b>Edition Date</b>	<b>LNK Date</b>	<b>NM Date</b>
16540	1:3000000	13	10/2010	03/03/2015	02/14/2015

*Table 15: Largest Scale Raster Charts*

#### 16540

There are a number of soundings and contours that need to be updated on chart 16540. In the southern middle area of the chart the 39 fm charted sounding has a 33 fm sounding to the east and a 32 fm sounding to the south, both approximately 1200m away as depicted in Figure 22. The 25 fm sounding on the southwest side of sheet H12759 seems to be charted approximately 8 fm shoaler than was discovered in this survey, as seen in Figure 23. The northeast corner of sheet H12759 was more than 20 fm deeper than charted, as seen in Figure 24. In the southern middle area of sheet H12759 it was discovered that the 42 fm sounding on the chart should be updated to 39 fm as seen in Figure 25. In the northwestern area of sheet H12759 there is a charted 45 fm sounding that has a 41 fm surveyed sounding to the north of it as seen in Figure 26. Figure 27 displays the 44 fm charted sounding in the southeast corner of the sheet which has surveyed soundings of 40 fm present nearby. The 50 fm contour in the northern area of sheet H12759 is generally 400m-1800m further south than charted as seen in Figure 28.

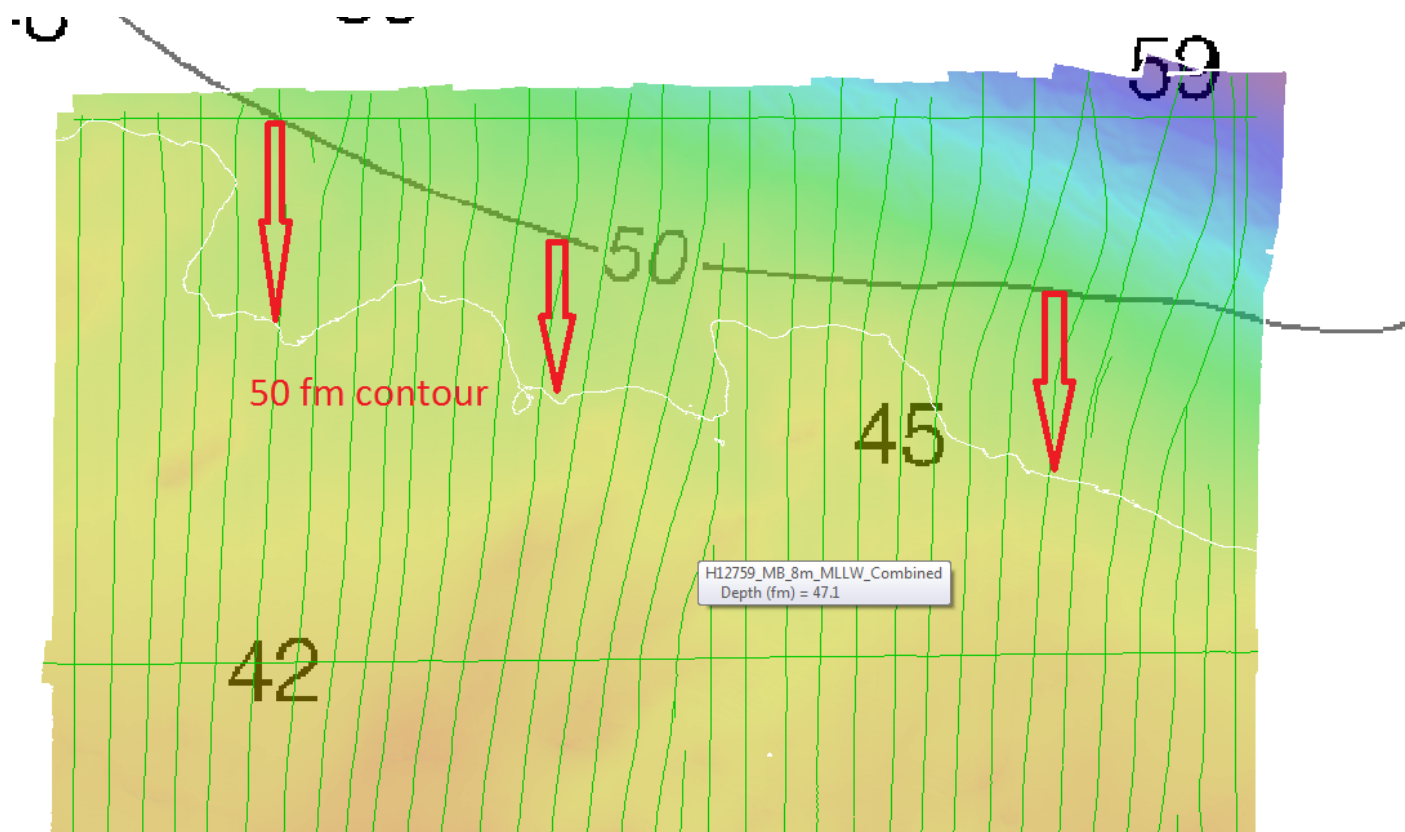

Figure 28: Contour discrepancy 1.

Figure 29: Contour discrepancy 2

### D.1.2 Electronic Navigational Charts

The following are the largest scale ENC's, which cover the survey area:

ENC	Scale	Edition	Update Application Date	Issue Date	Preliminary?
US3AK50M	1:300000	17	04/09/2014	04/09/2014	NO

*Table 16: Largest Scale ENC's*

#### US3AK50M

This comparison agrees with Chart 16540, see discussion above.

### D.1.3 Maritime Boundary Points

No Maritime Boundary Points were assigned for this survey.

### D.1.4 Charted Features

No charted features exist for this survey.

### D.1.5 Uncharted Features

No uncharted features exist for this survey.

### D.1.6 Dangers to Navigation

No Danger to Navigation Reports were submitted for this survey.

### D.1.7 Shoal and Hazardous Features

No shoals or potentially hazardous features exist for this survey.

**D.1.8 Channels**

No channels exist for this survey. There are no designated anchorages, precautionary areas, safety fairways, traffic separation schemes, pilot boarding areas, or channel and range lines within the survey limits.

**D.1.9 Bottom Samples**

Three bottom samples were assigned and investigated. Bottom samples are included in the H12759 Final Feature File.

**D.2 Additional Results****D.2.1 Shoreline**

Shoreline was not assigned in the Hydrographic Survey Project Instructions or Statement of Work.

**D.2.2 Prior Surveys**

Prior survey comparisons exist for this survey, but were not investigated.

**D.2.3 Aids to Navigation**

No Aids to navigation (ATONs) exist for this survey.

**D.2.4 Overhead Features**

No overhead features exist for this survey.

**D.2.5 Submarine Features**

No submarine features exist for this survey.

**D.2.6 Ferry Routes and Terminals**

No ferry routes or terminals exist for this survey.

**D.2.7 Platforms**

No platforms exist for this survey.

**D.2.8 Significant Features**

No significant features exist for this survey.

**D.2.9 Construction and Dredging**

No present or planned construction or dredging exist within the survey limits.

**D.2.10 New Survey Recommendation**

No new surveys or further investigations are recommended for this area.

**D.2.11 Inset Recommendation**

No new insets are recommended for this area.

## E. Approval Sheet

As Chief of Party, field operations for this hydrographic survey were conducted under my direct supervision, with frequent personal checks of progress and adequacy. I have reviewed the attached survey data and reports.

All field sheets, this Descriptive Report, and all accompanying records and data are approved. All records are forwarded for final review and processing to the Processing Branch.

The survey data meets or exceeds requirements as set forth in the NOS Hydrographic Surveys and Specifications Deliverables Manual, Field Procedures Manual, Letter Instructions, and all HSD Technical Directives. These data are adequate to supersede charted data in their common areas. This survey is complete and no additional work is required with the exception of deficiencies noted in the Descriptive Report.

# OPR-P183-FA-15

## *ERZT Evaluation – Interim Deliverable*

---

This document is intended to satisfy the ERZT component of the Vertical Control Requirements of the Hydrographic Survey Project Instructions (PI) for OPR-P183-FA-15.

This is a comparison of the final discrete zoning and ERZT method for vertical transformation. Given that discrete tidal zoning is the conventional and accepted method, it is regarded as a baseline for this evaluation.

### **Procedure**

The ERZT evaluation was conducted IAW the Project Instruction and additional guidance found in the Pydro 14.6 distribution

(Pydro\Lib\sitepackages\HSTP\Pydro\PostAcqTools\_CompareTSeries.docx)

Basic examination of the 100m resolution Separation Model derived from CARIS (OPR-P183-FA-15\_ERZT\_XL\_Separation\_Model.csar) was performed to verify the presence of artifacts, gaps and consistency.

Crossline data were referenced to MLLW via final discrete zoning and separately via application of

GPS Tide using created separation model (OPR-P183-FA-15\_ERZT\_XL\_Separation\_Model.csar). Time series data for the MiddlePD sensor (nadir depth) were extracted from both data sets and differenced using the Pydro PostAcq toolset. Data was gridded and difference surface between the two datasets were created as qualitative test.

## Results

Registry Number	Vessel HVF Designation	Depth Samples	Mean Difference (m)	Standard Deviation (m)
H12758	FA_S220_EM710_2015	53575	0	0.014
H12759	FA_S220_EM710_2015	67120	-0.218	0.047
H12760	FA_S220_EM710_2015	62144	0.042	1.676
H12780		<b>36958</b>	<b>-0.059</b>	<b>0.02</b>
	FA_2805_200kHz_7125_256bms_2015	22175	0	0.014
	FA_2806_200kHz_7125_256bms_2015	5019	0	0.021
	FA_2808_200kHz_7125_256bms_2015	9764	-0.059	0.025
H12782	FA_S220_EM710_2015	50339	0.006	0.995
<b>OPR-P183-FA-15</b>	<b>Composite Result:</b>	<b>270136</b>	<b>-0.0327</b>	<b>0.3988</b>

**Table 1: MiddlePD time series statistics (Discrete Zoned minus GPS Tide with SEP file applied).**

Separation model (OPR-P183-FA-15\_ERZT\_XL\_Separation\_Model.csar) does not show any gaps within the survey areas. See figure below.

OPR-P183-FA-15\_ERZT\_XL\_Separation\_Model overlaid with H12758, H12759, H12760 and H12780. Color bands correspond to 25 cm intervals.

OPR-P183-FA-15\_ERZT\_XL\_Separation\_Model overlaid with H2782. Color bands correspond to 25 cm intervals.

OPR-P183-FA-15\_ERZT\_XL\_Separation\_Model statistical Information

H12758, H12759, H12760 and H12780 Discrete minus ERS crossline CUBE surface.

H12782 discrete minus ERS crossline CUBE surface.

Percent of nodes	Deviation (m)
50%	+/- 0.06
60%	+/- 0.06
70%	+/- 0.07
80%	+/- 0.13
90%	+/- 0.16
95%	+/- 0.20

## **Recommendation**

This preliminary analysis show a strong agreement between the two reduction methods, and the greater internal consistency of the data transformed with the separation model created in CARIS method, the Hydrographer recommends proceeding with GPS tides applied (with separation model created in CARISe) for all data reduction on OPR-P183-FA-15, pending evaluation of the main scheme trajectories.

**TIDE NOTE FOR HYDROGRAPHIC SURVEY**

**DATE :** June 08, 2015

**HYDROGRAPHIC BRANCH:** Pacific  
**HYDROGRAPHIC PROJECT:** OPR-P183-FA-2015  
**HYDROGRAPHIC SHEET:** H12759

**LOCALITY:** 10 NM North of Simeonof Island, Shumagin Islands, AK  
**TIME PERIOD:** May 16 - May 25, 2015

**TIDE STATION USED:** 9459450 Sand Point, AK  
Lat. 55° 19.9'N Long. 160° 30.3' W  
**PLANE OF REFERENCE (MEAN LOWER LOW WATER):** 0.000 meters  
**HEIGHT OF HIGH WATER ABOVE PLANE OF REFERENCE:** 1.988 meters

**REMARKS: RECOMMENDED ZONING**

Preliminary zoning is accepted as the final zoning for project OPR-P183-FA-2015, H12759, during the time period between May 16 - May 25, 2015.

Please use the zoning file P183FA2015CORP submitted with the project instructions for OPR-P183-FA-2015. Zones SWA193 and SWA193A are the applicable zones for H12759.

**Refer to attachments for zoning information.**

**Note 1:** Provided time series data are tabulated in metric units (meters), relative to MLLW and on Greenwich Mean Time on the 1983-2001 National Tidal Datum Epoch (NTDE).

## APPROVAL PAGE

H12759

Data meet or exceed current specifications as certified by the OCS survey acceptance review process. Descriptive Report and survey data except where noted are adequate to supersede prior surveys and nautical charts in the common area.

The following products will be sent to NCEI for archive

- H12759\_DR.pdf
- Collection of depth varied resolution BAGS
- Processed survey data and records
- H12759\_GeoImage.pdf

The survey evaluation and verification has been conducted according current OCS Specifications.
