## NOAA Form 76-35A

## U.S. Department of Commerce National Oceanic and Atmospheric Administration National Ocean Survey

# **DESCRIPTIVE REPORT**

Type of Survey:	Navigable Area
-----------------	----------------

Registry Number: W00444

# **LOCALITY**

State: California, Oregon, Washington

General Locality: CA, OR, WA Coastline

Sub-locality: Channel Islands to Cape Alava

## 2017

CHIEF OF PARTY Nicole Raineault E/V Nautilus

## LIBRARY & ARCHIVES

Date:

NOAA FORM 77-28 (11-72)	U.S. DEPARTMENT OF COMMERCE NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION	REGISTRY NUMBER:
HYD	W00444	

INSTRUCTIONS: The Hydrographic Sheet should be accompanied by this form, filled in as completely as possible, when the sheet is forwarded to the Office.

State: California, Oregon, Washington

General Locality: CA, OR, WA Coastline

Sub-Locality: Channel Islands to Cape Alava

Scale: 1:10,000

Dates of Survey: 06/29/2017 to 07/04/2017

Instructions Dated: N/A

Project Number: ESD-PHB-18

Field Unit: E/V Nautilus

Chief of Party: Nicole Raineault

Soundings by: Multibeam Echo Sounder

Imagery by: N/A

Verification by: Pacific Hydrographic Branch

Soundings Acquired in: meters at Mean Sea Level

#### Remarks:

The purpose of this survey is to provide contemporary surveys to update National Ocean Service (NOS) nautical charts. All separates are filed with the hydrographic data. Any revisions to the Descriptive Report (DR) generated during office processing are shown in bold red italic text. The processing branch maintains the DR as a field unit product, therefore, all information and recommendations within the body of the DR are considered preliminary unless otherwise noted. The final disposition of surveyed features is represented in the OCS nautical chart update products. All pertinent records for this survey, including the DR, are archived at the National Centers for Envitronmental Information (NCEI) and can be retrieved via <a href="http://www.ncei.noaa.gov/">http://www.ncei.noaa.gov/</a>.

### DESCRIPTIVE REPORT MEMO

June 18, 2018

**MEMORANDUM FOR:** Pacific Hydrographic Branch

**FROM:** Nicole Raineault

Lead Scientist, E/V Nautilus

**SUBJECT:** Submission of Suvey W00444

In partnership with the NOAA Channel Islands National Marine Sanctuaries (CINMS), the Ocean Exploration Trust acquired exploratory mapping data of geological and geophysical aspects of the region, while covering areas not recently acquired with modern day survey techniques, in an effort to fill in gaps identified by the Southern California Seafloor Mapping Initiative. The CINMS and NOAA National Center for Coastal and Ocean Science (NCCOS) started the Southern California Seafloor Mapping Initiative (http://sanctuaries.noaa.gov/science/conservation/pdfs/seafloor-mapping-initiative.pdf) to identify areas that need to be mapped with modern hydrographic methods and organize resources to coordinate closing those gaps. Accurate, full coverage data is critical for informing marine management decision-making. The Office of Coast Survey is contributing to this initiative by post processing the Ocean Exploration Trust data for application to the chart and for use by NCCOS and the CINMS.

Single resolution grids were created in CARIS HIPS and SIPS 10.4

Due to the nature of the survey, soundings were not reduced to MLLW and remain at surveyed datum.

The submitted data was at Survey Time Water Level. New tide uncertainty values were applied to the data to bring it to Mean Sea Level. The data was then gridded and shifted to Mean Lower Low Water using a separation model.

The Joint Hydrographic Center Integrated Ocean and Coastal Mapping Group received raw and processed data from the Ocean Exploration Trust and various reports including: instrument lists and calibration reports, equipment wiring diagrams, vessel survey report, and the most recent Multibeam Advisory Committee (MAC) System Review report from 2015. These reports have been included in the data submission. Qimera version 1.2.5 was used by OET to process the data and exported GSFs were included in the data submission. Some of the raw data were used to process the grids submitted to the Coast Survey's Hydrographic Surveys Division in Caris Hips and Sips 10.4. This survey also contains data sourced directly from the submitted GSFs. Sound speed data was collected and applied during acquisition. Sound speed data are stored in the raw .ALL files. No major sound speed errors were found in the dataset. This data was reconverted from the raw .all files and had sound velocity, tides and uncertainty applied in order to create the CUBE grids that will be used for nautical chart updates. The data that was not converted from raw was converted into CARIS HIPS and SIPS from the processed GSF data at the NOAA's Atlantic Hydrographic Branch. This data did not have tides applied after conversion and only had the Uncertainty applied in order to make the necessary grids. All data has been processed in CARIS HIPS and SIPS and has been scanned for "fliers",

depth anomalies, and where these anomalies exist the data has been examined and spurious soundings have been removed.

New tide uncertainty values were applied to the data to bring it to Mean Sea Level. The data was then gridded and shifted to Mean Lower Low Water using a separation model.

There were no DTONs created for this survey.

Ocean Exploration Trust acquired the data outlined in this report. Data are available at www.oceanexplorationtrust.org

The survey covers an area of predominantly sparse chart soundings. High variability is observed between charted soundings and survey soundings, with some flat areas agreeing well and some areas different by 50 -100m, due to the highly irregular nature of the seabed in the area. Large discrepancies throughout the survey exist between charted and W00444 survey depths.

Concur with clarification. W00442 - W00445 were processed and reviewed concurrently and it was noted that there was generally good agreement amongst the surveys in the areas of overlap. Any disagreements between surveys were likely due to sediment shifting in certain areas. All of the surveys are offshore in nature and extremely deep, therefore, all of the discrepancies noted with the charted data are not navigationally significant regardless of the magnitude.

\* No crosslines were collected as part of the data set, however transit lines were recorded and included in the submission and provide some areas for perpendicular line comparison. Transit lines were included to maximize data potential and provide more opportunity for overlap with other surveys for depth validation. \*

This survey does meet charting specifications and is adequate to supersede prior data. These data are adequate to supersede charted data in their common areas. This survey is complete and no additional work is required. All surfaces, this Survey Summary Report, and all accompanying records and data are approved. All records are forwarded for final review and processing to the Processing Branch

Concur with clarification. The data has been given CATZOC B and is only adequate to supersede data that has been evaluated to have equal or lesser quality, such as older CATZOC B data or any CATZOC C or D data.

Survey data should be archived at NCEI and the DR memo forwarded to HSD.

	Metadata for Survey W00444	
Project	ESD-PHB-18	
Survey	W00444	
State	CaliforniaOregonWashington	
Locality	CA, OR, WA Coastline	
Sub-Locality	Channel Islands to Cape Alava	
Scale of Survey	1:10000	
Sonars Used	Kongsberg Maritime EM302 (MBES)	
Horizontal Datum	World Geodetic System (WGS) 1984	
Vertical Datum	Mean Sea Level	
Vertical Datum Correction	VDatum	
Projection	Projected UTM 10N	
Field Unit	E/V Nautilus	
Survey Dates	06/29/2017 - 07/04/2017	
Chief of Party	Ocean Exploration Trust	
Submission Date	06/18/2018

## External Source Data Use Permissions Form

Data provider name and title:

Lindsay J. Gee Mapping and Science Coordinator Ocean Exploration Trust 215 South Ferry Road Narragansett RI 02882 603-957-1461

NOAA's Office of Coast Survey greatly appreciates your voluntary contribution of data. These data will be used to update NOAA's nautical charts and ancillary products. Once processed, these data will be archived at the National Center for Environmental Information (NCEI) and made publicly available. Before the Office of Coast Survey applies your data to nautical charts, please acknowledge that you understand and accept that these data will be considered in the public domain once it is archived at NCEI. We require your acknowledgement to apply your data to nautical charts and archive it at NCEI. Thank you for your continued support.

Hydrographic survey/dataset name and description:

E/V Nautilus Exploratory Mapping Data in the vicinity of Olympic Coast National Marine Sanctuary, Channel Islands National Marine Sanctuary and in areas identified by the Southern California Seafloor Mapping Initiative.

Data provider signature:

Thank you,

Kurt Mueller Physical Scientist National Oceanic and Atmospheric Administration Pacific Hydrographic Branch 7600 Sand Point Way NE Seattle, WA 98115 206-526-6853

#### APPROVAL PAGE

## W00444

Data meet or exceed current specifications as certified by the OCS survey acceptance review process. Descriptive Report and survey data except where noted are adequate to supersede prior surveys and nautical charts in the common area.

The following products will be sent to NCEI for archive

- Descriptive Report
- Collection of Bathymetric Attributed Grids (BAGs)
- Processed survey data and records
- GeoPDF of survey products

The survey evaluation and verification has been conducted according current OCS Specifications, and the survey has been approved for dissemination and usage of updating NOAA's suite of nautical charts.

Approved:			

Commander Olivia Hauser, NOAA

Chief, Pacific Hydrographic Branch
